## FOREWORD

*West Virginia Vital Statistics 2012* publication provides an in-depth look at births, deaths, marriages and divorces that occurred among state residents in 2012. Beginning with the 2008 edition, state, county and city sections are presented separately. For example, a table on county-level birth data which was previously in the birth section is now located in the county section beginning on page 103. Please see the Table of Contents for further reference.

West Virginia had a natural decrease in population (excess of deaths over births) for the fifth year in a row. West Virginia rose in overall population between 2011 and 2012 with 19 of the 55 counties gaining population.

The number of total births increased (20,705 to 20,813) from 2011 to 2012 while the births to teenage mothers decreased. Births to unmarried mothers stayed about the same in 2012 as 2011 but over two out of every five births still occurred out of wedlock. Among the unmarried mothers giving birth in West Virginia, a father was established through a paternity affidavit in 70.6% of these births, which is the same as 2011.

Of the women who gave birth in 2012, 84.1% received prenatal care during the first trimester of pregnancy while 26.1% smoked during pregnancy. The percentage of low birthweight babies decreased in 2012 going from 9.6% in 2011 to 9.2%. In 2012, 36.4% of all babies were delivered by Cesarean section.

The number of deaths decreased by 217 in 2012. The average age at death for West Virginians was 68.8 for men and 75.4 for women. Heart disease, cancer, chronic lower respiratory disease and accidents were the four leading causes of death, accountable for 57.0% of all deaths in West Virginia. Motor vehicle traffic accident deaths decreased by 23 in 2012, from 377 to 354.

The infant death rate rose from 6.8 per 1,000 live births in 2011 to 7.3 in 2012. The majority (82.2%) of infant deaths were due to conditions originating in the perinatal period, congenital malformations and SIDS (Sudden Infant Death Syndrome). The fetal death ratio dropped slightly from 4.3 per 1,000 live births in 2011 to 4.2 in 2012. Almost all (95.5%) of fetal deaths were due to conditions originating in the perinatal period.

Marriages decreased for the first time in three years, from 13,271 in 2011 to 12,996. Divorces also decreased from 9,620 in 2011 to 8,932 in 2012.

Induced termination of pregnancy (ITOP) or induced abortion was added to our annual report beginning in 2005. This section contains data of those terminations performed in West Virginia only. There were 1,828 ITOPs performed in the state in 2012 compared with 1,837 in 2011. In 2012, 76 of these procedures involved a minor under the age of 18 compared with 91 in 2011.

Because of limited funds and the high cost of printing, we ask that you please make copies of this publication and share it with others. Please note that these data can be accessed online later in the year at <http://www.wvdhhr.org/bph/hsc/statserv/> along with other statistical publications. If you need any additional information, please contact the Health Statistics Center at (304) 558-9100 or online at <http://www.wvdhhr.org/bph/hsc/contactUs.asp>.

## Selected Records and Trivia West Virginia, 2012

### Nativity

Oldest Father: 74  
 Youngest Father: 14  
 Oldest Mother: 47  
 Youngest Mother: 13  
 Highest Live Birth Order: 13<sup>th</sup> Delivery – 12 siblings (brothers and sisters)  
 Day Most Births Occurred: February 20 (91)  
 Day Fewest Births Occurred: November 22 (19)  
 Number of Live Born Twins: 562  
 Number of Live Born Triplets: 26  
 Number of Live Born Quadruplets: 4

### Most Popular Names for Babies

<u>Boys' Names</u>	<u>Number</u>	<u>Girls' Names</u>	<u>Number</u>
Mason	148	Emma	164
Liam	137	Isabella	112
Bentley	122	Sophia	111
Jacob	122	Ava	103
Hunter	121	Olivia	96
Landon	116	Madison	95
Aiden	112	Abigail	87
Noah	110	Addison	83
Levi	107	Aubrey	83
Brayden	104	Brooklyn	82

### Mortality

Oldest Male Decedent: 104  
 Oldest Female Decedent: 106  
 Number of Male Decedents 100 Yrs. & Older: 22  
 Number of Female Decedents 100 Yrs. & Older: 115  
 Day Most Deaths Occurred: November 15 (81)  
 Day Fewest Deaths Occurred: April 19 (32)

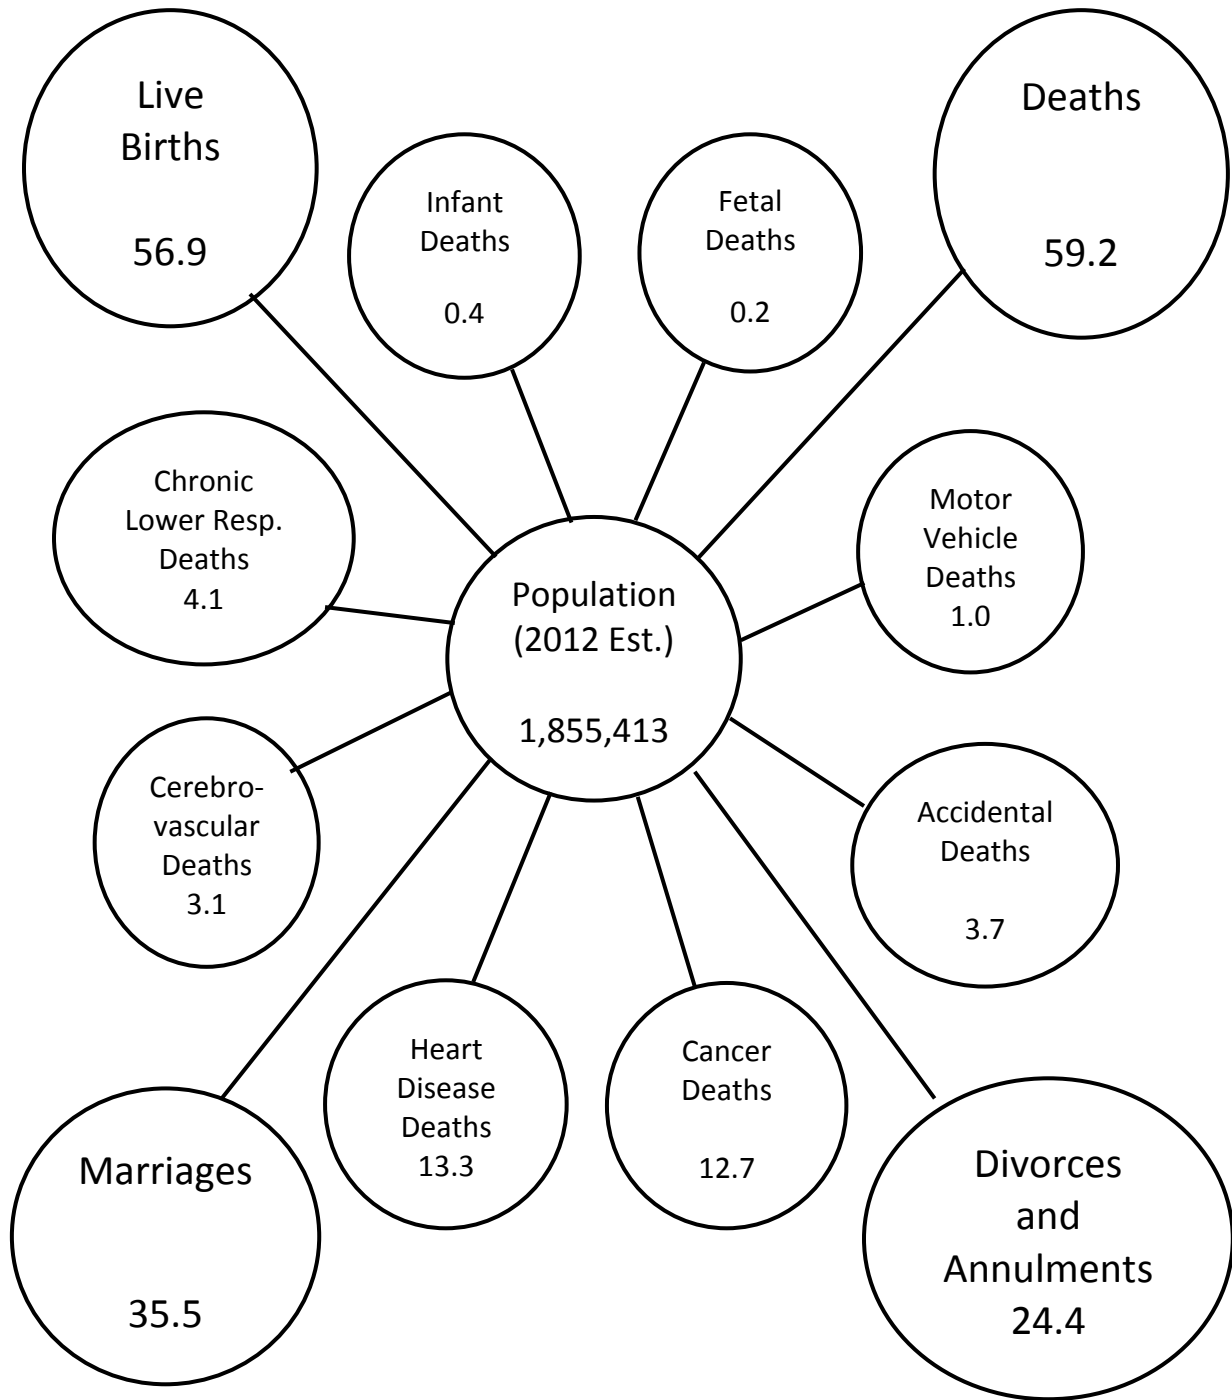

### Marriage

Oldest Groom: 91  
 Youngest Groom: 16  
 Oldest Bride: 91  
 Youngest Bride: 15  
 Largest Age Difference with Bride Older: 41 Years  
 Largest Age Difference with Groom Older: 50 Years

### Divorce

Oldest Male Divorcé: 93  
 Youngest Male Divorcé: 18  
 Oldest Female Divorcée: 89  
 Youngest Female Divorcée: 16  
 Marriage of Longest Duration Ending in Divorce: 66 Years

West Virginia Vital Statistics

# Population

## Population Summary

In 2012, 49 West Virginians were gained to the total population as a result of net migration. The 2012 Census shows an overall increase (approximately 0.1%) in the state's population since 2010, from 1,852,994 to 1,855,413. This increase is the result of a slight growth in the excess of immigration over outmigration during that span, in spite of the natural decrease (excess of deaths over births).

Even though there was an increase in the overall population from 2010 to 2012, less than one-third (16) of the state's 55 counties have shown an increase. Furthermore, thirteen (13) of the state's 30 largest cities have shown an increase in population since the 2010 Census.

The U.S. Census Bureau estimates the population during non-census years and can be found at [www.census.gov](http://www.census.gov). Updates are officially announced as of July 1 of every year until the decennial census, which is on April 1. Every year, the actual estimates change from previous years, but vintage years are still available on their website.

## West Virginia Population, 1925-2012

### Exhibit 1

Year	Population	Change in Population	
		Years	Percentage Change
1925*	1,593,005		
1930	1,729,205	1925 to 1930	8.5%
1935*	1,856,354	1930 to 1935	7.4%
1940	1,901,974	1935 to 1940	2.5%
1945*	1,708,000	1940 to 1945	-10.2%
1950	2,005,552	1945 to 1950	17.4%
1955*	1,880,000	1950 to 1955	-6.3%
1960	1,860,421	1955 to 1960	-1.0%
1965*	1,786,000	1960 to 1965	-4.0%
1970	1,744,237	1965 to 1970	-2.3%
1975*	1,803,000	1970 to 1975	3.4%
1980	1,949,644	1975 to 1980	8.1%
1985*	1,936,000	1980 to 1985	-0.7%
1990	1,793,477	1985 to 1990	-7.4%

West Virginia Vital Statistics  
**Births**

## Birth Summary

West Virginia's resident live births increased by 108 or 0.5%, from 20,705 in 2011 to 20,813 in 2012. The 2012 birth rate remained the same as 2011 at 11.2 per 1,000 population. The U.S. 2012 birth rate was 12.6 live births per 1,000 population, decreasing 0.1% from the 2011 rate of 12.7. As the graph below shows, West Virginia's birth rate has been well below the national rate since 1990. It continued its overall decline until 1996 and remained relatively stable from 1996 to 2006 and 2008 with a slight increase in 2007.

West Virginia and United States Birth Rates  
1990-2012

The 2012 U.S. fertility rate of 63.2 live births per 1,000 women aged 15-44 was lower (1.4%) than the 2011 rate (64.1). West Virginia's fertility rate increased 1.3%, from 59.9 in 2011 to 60.7 in 2012. A comparison of West Virginia and U.S. age-specific fertility rates is displayed below:

Fertility Rates* by Age Group West Virginia and United States, 2011					
15-19		20-44		Total (15-44)	
WV	U.S.**	WV	U.S.**	WV	U.S.**
43.8	29.5	64.3	69.5	61.3	63.0

\* All fertility rates were calculated using 2010 Census, U.S. Department of Commerce, Bureau of the Census.

\*\*National Center for Health Statistics, [http://www.cdc.gov/nchs/data/nvsr/nvsr62/nvsr62\\_09.pdf](http://www.cdc.gov/nchs/data/nvsr/nvsr62/nvsr62_09.pdf)

The fertility rate among women aged 15-19 in West Virginia was 48.5% higher than that among young women in the U.S. (43.8 vs. 29.5). The fertility rate among women aged 20-44 was lower by 7.5% in the state than in the nation (64.3 vs.69.5).

The number of births to teen mothers (ages 10-19) decreased by 50 (2.0%), from 2,462 in 2011 to 2,412 in 2012. The percentage of total births represented by teen births was lower in 2012 than 2011 (11.6% vs. 11.9%). The lower fertility rate among older women, however, resulted in teenage births continuing to constitute a higher proportion of total births than was found nationally (7.8% in 2012).

The percentage of births occurring out of wedlock has risen every year for quite some time. More than two of every five (44.7%) West Virginia resident births were to unwed mothers, compared to 43.8% in 2011. The percentages of white and black births that occurred out of wedlock for West Virginia residents in 2012 were 43.6% and 75.0%, respectively, compared to 42.8% and 76.5% in 2011. In the U.S. in 2012, 29.3% of births to white mothers (non-Hispanic) and 72.1% of births to black mothers (non-Hispanic) occurred out of wedlock. The percentage of West Virginia resident teen births to unmarried teen mothers decreased from 83.8% in 2011 to 82.9% in 2012.

There was a total of 1,917 low birthweight babies (those weighing less than 2,500 grams or 5½ pounds) born to West Virginia residents in 2012, 9.2% of all births. Of the 1,917 low birthweight infants, 1,284 or 67.0% were preterm babies born before 37 weeks of gestation. (Of all 2012 resident births with a known gestational age, 10.7% were preterm babies.) In 2012, 9.0% of babies born to white mothers and 12.9% of babies born to black mothers were low birthweight. Nationally, 8.0% of all infants weighed less than 2,500 grams at birth in 2012; 7.0% of births to white mothers (non-Hispanic) and 13.2% of births to black mothers (non-Hispanic) were of low birthweight.

In 2012, 84.1% of West Virginia mothers with known prenatal care began their care during the first trimester of pregnancy, compared with 83.2% of mothers nationwide in 2006 (the latest reliable data available). Among those with known prenatal care, 84.6% of white mothers began care during the first trimester; 74.8% of black mothers did so. (U.S. figures show that 88.1% of white mothers and 76.1% of black mothers had first trimester care.) No prenatal care was received by 0.5% of white mothers and 1.2% of black mothers.

Over one-fourth (26.4%) of the births in 2012 were to mothers who smoked during their pregnancies, while 0.3% of births were to women who reported using alcohol. National figures from 2012 show that 8.7% of women giving birth reported smoking during pregnancy; 0.8% used alcohol in 2004 (the latest data available). Among the state mothers who reported smoking during pregnancy, 14.3% of the babies born were low birthweight, compared with 7.4% among non-smoking mothers. Over one-third (36.4%) of 2012 state births were delivered by Cesarean section, compared with a national rate of 32.8%. One or more complications of labor and/or delivery were reported for 32.4% of deliveries in the state in 2012.

The statistics presented in this publication refer to resident data unless otherwise indicated. A resident birth is determined by the residence of the mother when she gives birth, i.e., if she lives in West Virginia. An occurrence birth is determined by where the mother gives birth. If a mother lives in West Virginia but gives birth in North Carolina, that is defined as a West Virginia resident birth and will be included as part of West Virginia's resident statistics; however, it is considered a North Carolina occurrence.

West Virginia Vital Statistics  
**Deaths**

## Death Summary

The number of West Virginia resident deaths decreased by 217, from 21,870 in 2011 to 21,653 in 2012. The state's crude death rate declined from 2011 at 11.8 per 1,000 population to 11.7 in 2012. The average age at death for West Virginians was 72.1 (68.8 for men and 75.4 for women), almost the exact same as the 2011 average of 72.1 (68.8 for men and 75.5 for women). One hundred and thirty-seven (137) West Virginia residents who died in 2012 were age 100 or older. The oldest man was 104 years old while the oldest woman was 106 years old at the time of death.

Heart disease, cancer and chronic lower respiratory diseases, the three leading causes of death, accounted for 50.8% of West Virginia resident deaths in 2012. Compared with 2011, the number of state deaths due to heart disease decreased by 59 or 1.2% while cancer deaths also decreased 2.9%. Chronic lower respiratory disease, the third leading cause, decreased 5.1%; stroke mortality, the fifth leading cause, increased 6.1%. Diabetes mellitus deaths decreased by 56 or 7.1%, while the number of reported deaths due to influenza/pneumonia decreased by 33 or 7.3%. Dementia, the sixth leading cause of death in the Mountain State, decreased by 13 or 1.3%, while Alzheimer's disease also decreased 3.6%. Accidental deaths were the fourth leading cause of death for the sixth year in a row. The number of accidental deaths declined by 94 (6.5%), from 1,445 in 2011 to 1,351 in 2012. Motor vehicle accident deaths decreased by 23 or 6.1%, from 377 in 2011 to 354 in 2012. Accidental poisoning deaths are still a major concern in West Virginia but it decreased by 93 (15.4%) from 603 in 2011 to 510 in 2012. Accidental poisoning accounted for nearly one-fourth (24.8%) of all deaths in the age group of 25-34. The vast majority of these deaths were due to both legal and illicit ingestion of prescription pharmaceuticals.

Accidents were the leading cause of death for ages one through 44 years. Motor vehicle accident fatalities and suicides are the two leading causes of death for young adults aged 15 through 24, accounting for nearly half (49.7%) of all deaths for this age group in 2012. West Virginia's 2012 motor vehicle fatalities included six children under five years of age, four more than 2011.

Suicides increased by 16, from 309 to 325 between 2011 and 2012. Male suicides increased by three or 1.2%, from 250 in 2011 to 253 in 2012; the number of female suicides (72) increased by 13 or 22.0% from 2011. Sixty percent (60.6%) of all suicide deaths were firearm related — 66.0% of male suicides and 41.7% of female suicides. The average age of death for a suicide victim in 2012 was 45.5 years. While suicide was the eleventh leading cause of death overall, it was the second leading cause of death for ages 15-34. The number of suicides among persons aged 19 and under was 15 in 2012, two more than 2011 at 13.

Homicides increased by three, from 107 in 2011 to 110 in 2012. Seventy-nine (79) of the homicide victims were male, 31 were female. The average age at death for a homicide victim in 2012 was 39.3 years. There were six homicide victims under the age of five in 2012, compared with eight in 2011. Nearly two-thirds (64.5%) of 2012 homicide deaths were due to firearms.

The statistics presented in this publication refer to resident data unless otherwise indicated. A resident death is determined by where the decedent last lived at the time of death. An occurrence death is determined by where the decedent died. If a person lived in West Virginia but died in Washington, DC, that is defined as a West Virginia resident death and will be included as part of West Virginia's resident statistics; however, it is considered a District of Columbia occurrence.

### Years of Potential Life Lost (YPLL)

YPLL is a measure of mortality calculated as the difference between age 75 (an average life span) and the age at death. Using YPLL before age 75, the sum of YPLL across all causes of death represents the total YPLL for all persons dying before the age of 75. A person dying at the age of 26 would therefore contribute 49 years to the total YPLL ( $75-26=49$ ). YPLL is an important tool in emphasizing and evaluating causes of premature death.

The YPLL from all causes decreased 0.8%, from 178,842 YPLL in 2011 to 177,365 in 2012. The four leading causes of YPLL in 2012 were malignant neoplasms (36,249 YPLL), diseases of the heart (26,005 YPLL), non-motor vehicle accidents (22,340 YPLL) and motor vehicle accidents (10,770 YPLL). Combined, these four causes accounted for over half (53.8%) of all years of potential life lost in 2012. In comparison to 2011, YPLL attributable to malignant neoplasms decreased from 20.5% to 20.4% of the total YPLL. YPLL due to diseases of the heart remained the same at 14.7%, YPLL due to non-motor vehicle accidents decreased from 14.5% to 12.6% and the percentage of total YPLL due to motor vehicle crashes decreased from 6.2% to 6.1%.

West Virginia Vital Statistics  
**Infant & Fetal Death**

## Infant and Fetal Death Summary

Deaths of infants under one year of age increased by 11, from 141 in 2011 to 152 in 2012. West Virginia's infant mortality rate also rose, from 6.8 per 1,000 live births in 2011 to 7.3 in 2012. The preliminary U.S. infant mortality was 6.0 in 2012.

The following table shows the decline in the national and state infant mortality rates from 1950 through 2012.

**1950 – 2012 Infant Mortality**  
**West Virginia and United States**  
(Number and Rate per 1,000 Live Births)

Year	West Virginia	United States
1950	31.4	29.2
1955	27.1	26.4
1960	25.3	26.0
1965	27.1	24.5
1970	23.3	20.0
1975	18.3	16.1
1980	11.8	12.6
1985	10.7	10.6
1990	9.8	9.1
1995	7.6	7.5
2000	7.6	6.9
2005	8.1	6.9
2006	7.4	6.7
2007	7.4	6.8
2008	7.7	6.6
2009	7.8	6.4
2010	7.3	6.1
2011	6.8	6.0
2012	7.3	6.0

The state's 2012 white infant mortality rate increased from 6.5 in 2011 to 6.9 in 2012, while the rate for black infants increased from 16.8 to 19.6 (see Statistical Variation in Appendix B, page 163). West Virginia's 2012 race-specific infant mortality rates and comparable U.S. rates are shown in the table on the following page.

**2012 West Virginia and United States  
Infant Mortality by Race of Infant  
(Number and Rate per 1,000 Live Births)**

Race of Infant	West Virginia		United States*	
	Number	Rate	Number	Rate
All Races	152	7.3	23,629	6.0
White	135	6.9	15,258	5.1
Black	15	19.6	7,095	11.2
Other	2	5.3	1,276	3.9

\*Source: [http://www.cdc.gov/nchs/data/nvsr/nvsr63/nvsr63\\_09.pdf](http://www.cdc.gov/nchs/data/nvsr/nvsr63/nvsr63_09.pdf)

Approximately one out of seven (13.2%) infant deaths in 2012 was due to SIDS (sudden infant death syndrome). Approximately one in four (23.0%) was the result of congenital malformations, while 46.1% were due to certain conditions originating in the perinatal period, including disorders relating to short gestation and unspecified low birthweight (12.5%).

### Neonatal/Postneonatal Deaths

The number of neonatal deaths rose by 10, from 86 in 2011 to 96 in 2012; the neonatal death rate also increased, from 4.2 deaths among infants aged less than 28 days per 1,000 live births in 2011 to 4.6 in 2012. Neonatal deaths comprised 63.2% of all West Virginia resident infant deaths in 2012, compared with 61.0% in 2011. The rate of postneonatal deaths remained the same at 2.7 deaths per 1,000 neonatal survivors between 2011 and 2012. The 2012 preliminary U.S. neonatal death rate was 4.0, while the postneonatal rate was 2.0 deaths per 1,000 neonatal survivors.

### Fetal Deaths

The 88 resident fetal deaths reported with a birthweight of at least 350 grams or occurring after 20 or more weeks of gestation (if the weight is unknown) in 2012 were two less than in 2011 (90). The fetal death ratio also decreased, from 4.3 deaths per 1,000 live births in 2011 to 4.2 in 2012. The majority (95.5%) of fetal deaths were due to conditions originating in the perinatal period, including complications of placenta, cord and membrane (34.1%), maternal conditions (4.5%), maternal complications (11.4%), short gestation and low birthweight (6.8%) and other ill-defined perinatal conditions (31.8%). Congenital malformations accounted for 4.5% of all fetal deaths.

Fetal Deaths, Neonatal Deaths and Postneonatal Deaths: Number and Rate/Ratio

West Virginia Vital Statistics  
**Induced Terminations of  
Pregnancy (ITOP)**

## Induced Terminations of Pregnancy (ITOP) Summary

The annual reporting of induced terminations of pregnancy (ITOP), also properly referred to as “induced abortion,” was mandated in the latest revision of the West Virginia Code. An ITOP is a purposeful interruption of an intrauterine pregnancy with the intention other than to produce a live-born infant and which does not result in a live birth. The management of prolonged retention of products of conception following fetal death is excluded. The major distinguishing feature of this event is the fact that it is “purposeful” rather than spontaneous. A spontaneous interruption of a pregnancy is also known as a fetal death or a spontaneous abortion or, more commonly, as a miscarriage or a stillbirth.

One of the primary differences between the reporting of ITOP statistics and birth and death statistics in this publication is that ITOP statistics reflect events that occurred in West Virginia. Due to exchange agreements with other states, births and deaths to West Virginia residents that occur elsewhere are reported back to the state, making it possible to ascertain the number of births and deaths among state residents in a given time frame regardless as to where the event occurred. Information on the number of West Virginia residents who obtain an ITOP in another state is infrequently reported back to West Virginia by the state where the procedure took place, normally due to restrictions within the other state’s legal code.

The only two free-standing clinics that perform ITOPs on demand in West Virginia are in Charleston, which makes the likelihood of out-of-state ITOPs greater in some regions of the state. It is unlikely that the majority of women living in the northern or eastern panhandles of the state seek an ITOP in West Virginia. Due to known incomplete reporting, therefore, the procedures performed on West Virginia residents in other states have been excluded from the compiled statistics.

West Virginia legal code requires clinics to provide counseling and informational guidance to females seeking an abortion. All but one of the 2012 ITOP records indicate the female did in fact receive counseling, compared to all but two in 2011. There are some isolated incidents where the abortion needs to be informed due to a medical emergency. In 2012, there was one ITOP performed due to a medical emergency compared to two in 2011.

In 2012, there were 1,828 ITOPs performed in West Virginia, nine or 0.5% less than in 2011 (1,837). Nearly seven out of every eight (86.4%) ITOPs involved a West Virginia resident, while 6.3% were Kentucky residents and 6.2% were residents of Ohio, compared with 2011 percentages of 88.5%, 6.0% and 4.8%, respectively. The median age of women having an ITOP in 2012 was 25, same as 2011. There were 76 procedures in 2012 involving females under the age of 18, of which 72 were performed on unemancipated\*minors, compared with 91 in 2011, of which 89 were performed on unemancipated minors. Four out of every five (81.0%) of the 2012 ITOPs performed in West Virginia involved women who were not married at the time. Over one-third (35.7%) of the 2012 ITOPs involved women who had never had a previous live birth, while 89.4% were to women who had two or fewer children. There were six ITOPs performed on a woman who had six or more children. More than three out of every five (64.3%) involved women for whom it was their first ITOP, while nearly all (95.6%) involved women who had two or fewer previous ITOPs. Eight ITOPs were performed upon women who previously had six or more ITOPs.

\*For the purpose of ITOP reporting, unemancipated minor means any person under the age of 18 years who has not graduated from high school and is neither married nor who has been otherwise emancipated.

Induced Terminations of Pregnancy

West Virginia Vital Statistics  
**Marriages & Divorces**

## Marriages

The number of marriages in West Virginia decreased for the first time since 2009, from 13,271 in 2011 to 12,996 in 2012. The marriage rate in 2012 was 7.0 per 1,000 population, lower than the 2011 rate of 7.2. The 2012 U.S. provisional rate was 6.8 per 1,000 population.

For all marriages in 2012, the median age was 28 for brides and 31 for grooms. The mode (most frequently reported age) for all marriages was 22 for brides and 24 for grooms. There were 118 brides and 22 grooms aged less than 18. There were 197 brides and 375 grooms age 65 or older. Also in 2012, there were 204 marriages in which the groom was 20 years or more older than the bride, while there were 13 marriages in which the bride was at least 20 years older.

For first marriages, the median age for brides was 24; for grooms it was 26. The mode for first marriages in West Virginia was 22 for brides and 24 for grooms. All of West Virginia's brides and grooms less than 18 years of age were in their first marriage. There were no brides and ten grooms age 65 or older for which it was a first marriage.

## Divorces and Annulments

The number of divorces and annulments decreased by 688 or 7.2%, from 9,620 in 2011 to 8,932 in 2012. The 2012 rate of 4.8 per 1,000 population was lower than the 2011 rate of 5.2.

Of the 8,932 divorces in West Virginia in 2012, the median duration of marriage was seven years. Over one out of every five (21.1%) West Virginia divorces with a known duration in 2012 involved marriages lasting only two years or less; 7.6% involved marriages of 25 years or longer. There were eight divorces involving a wife aged less than 18 and there were seven husbands under age 18. During 2012, 129 divorces involved a wife aged 65 or older and 230 involved a husband in the age group.

Over one-half (53.4%) of the divorces involved no children under 18 years of age in the family, while one child was involved in 22.4% of all divorces and two children were involved in 17.5%. Five divorces involved six or more children.

## Note Regarding Marriage and Divorce/Annulment Statistics

Statistics regarding marriage and divorce/annulments are by occurrence only. They include only those that occur within West Virginia regardless of where the couple reside.

West Virginia Vital Statistics  
**County-Level Data**

## County and City Summary

Beginning with the *West Virginia Vital Statistics 2008* report, the Health Statistics Center began separating county statistics from the state totals. Although the tables have been rearranged from previous publications, the same information is presented. The birth section is followed by information on deaths (including infant and fetal) and then marriages and divorces. Practically all of ITOP data is collected from two clinics, both in Kanawha County, and is reported as occurrence data. ITOP statistics displayed at the county or city level would be meaningless and misleading.

*West Virginia Vital Statistics 2007* expanded the number of cities for which data were presented. Before then, data were included for the 15 cities in the state that had populations of 10,000 or more. Because some cities have dropped below that mark in the past decade or more, it was then decided to include data for the state's 25 most populated cities, regardless of the size of the population. It has now increased to the 30 most populated cities beginning with the 2010 edition.

 Health Statistics Center, 2015

West Virginia Vital Statistics

**Appendix A:**  
**ICD-10 Codes**

APPENDIX A  
GROUPINGS OF ICD-10 CODES

<u>ICD-10 CODE</u>	<u>SELECTED CAUSE</u>
A15-A19	Tuberculosis
A40-A41	Septicemia
B20-B24	Human Immunodeficiency Virus Infection
C00-C97	Malignant Neoplasms
C15-C26	====of Digestive Organs
C18	====of Colon
C25	====of Pancreas
C30-C39	====of Respiratory and Intrathoracic Organs
C33-C34	====Trachea, Bronchus and Lung
C50	==of Breast
C51-C68	==of Genitourinary Organs
C53	====Cervix Uteri
C56	====Ovary
C61	====Prostate
C67	====Bladder
	====All Other (Malignant Neoplasms)
D00-D48	Benign Neoplasms, Carcinoma in Situ and Neoplasms of Unspecified Nature
E10-E14	Diabetes Mellitus
F01, F03	Dementia
G30	Alzheimer's Disease
I00-I78	Major Cardiovascular Diseases
I00-I09, I11, I13,	
I20-I51	====Diseases of the Heart
I20-I25	====Ischemic Heart Disease
I10, I12	====Essential Hypertension and Hypertensive Renal Disease
I60-I69	====Cerebrovascular Disease
I70	====Arteriosclerosis
I71-I78	====Other Diseases of the Arteries, Arterioles and Capillaries
J09-J18	Influenza and Pneumonia
J09-J11	====Influenza
J12-J18	====Pneumonia
J40-J47	Chronic Lower Respiratory Diseases
J40-J43, J45-J46	====Bronchitis, Emphysema and Asthma
J60-J70	Lung Diseases Due to External Agents
J60	====Coal Worker's Pneumoconiosis
K70, K73-K74	Chronic Liver Disease and Cirrhosis
N00-N07, N17-N19,	
N25-N27	Nephritis, Nephrotic Syndrome and Nephrosis
Q00-Q99	Congenital Malformations, Deformations and Chromosomal Abnormalities
R95-R99	Ill-Defined and Unknown Causes of Death

Y10-Y34, Y87.2	Injury Undetermined Whether Accidentally or Purposely Inflicted
	All Other Causes (Residual)

West Virginia Vital Statistics

**Appendix B:  
Methodology,  
Rates/Ratios,  
and Definitions**

## APPENDIX B METHODOLOGY

Data used to prepare this report are taken from birth and death certificates, fetal death reports, marriage applications, divorce reports, Induced Terminations of Pregnancy (ITOP) and paternity affidavits occurring in calendar year 2012 and filed in the state office of vital statistics prior to February 18, 2014. Vital events occurring to West Virginia residents in other states and tabulated by June 1, 2014 are also included in totals by residence.

### Place of Residence vs. Place of Occurrence

Data on vital events can be reported in two ways: by county of residence or by county of occurrence. For example, 373 births occurred within the geographic confines of Marion County of which only so many were to mothers who reside in Marion County; the remainder reside in other counties or states. Resident births for the county for 2012 totaled 630 which include 264 births that occurred in Marion County and 366 births to Marion County residents that occurred elsewhere. With the exception of Tables 11, 12, 13, 14, 16 and 46 (and Exhibit 9), natality data presented in this report are based on place of residence and resident populations are used to calculate rates.

With the exception of Table 19 and the second page of Table 54, mortality data are similarly reported by place of residence.

### Statistical Variation

All statistics contain variations that are the result of chance, error, or omission. This characteristic is of particular importance in classifications of events with small numbers, in which small variations are proportionately large in relation to base figures. For example, small changes in the number of deaths or births in small population areas or in the number of deaths from uncommon causes could result in large changes in the respective rates. For this reason, rates for counties with small populations or other small bases should be used with caution.

Table 31 presents the number of infant deaths by race of mother while the table on page 76 in the summary has the number of infant deaths by race of infant.

### Geographic Classification

The county has been used as the basic unit of tabulation throughout this report. Data have also been supplied for public health management districts and for the total state. In some instances, data have been supplied for individual cities.

## APPENDIX B (Cont'd)

### Cause of Death Classification

The cause of death is coded from information contained in the medical certification section of the death certificate. This portion of the certificate is completed by the attending physician. In the case of unattended death, the medical examiner is responsible for investigation and certification.

Effective in 1999, the National Center for Health Statistics and the World Health Organization adopted the *Tenth Revision of the International Classification of Diseases Adapted for Use in the United States, 1999 (ICD-10)*. The deaths with codes A00 through T98 and Z00-Z99 were coded using the “nature of injury” causes, while those with codes V01 through Y98 were coded using the “external cause” of death. The external codes are used to indicate a death due to an external rather than an internal cause.

In several tables individual causes of death have been grouped into important selected causes of death. See Appendix A, Page 159, “Groupings of ICD-10 Codes,” for a listing of the selected causes of death.

### Population

The rates given in this publication were calculated using the 2012 population estimated figures from the U.S. Department of Commerce, Bureau of the Census. This can be found on the Internet at <http://www.census.gov/popest/data/index.html> and then go to American FactFinder which is where detailed population figures are stored.

### Forms

The following is a list of the certificates and forms used in obtaining the data used in this publication.

- Certificate of Live Birth
- Physician’s/Medical Examiner’s Certificate of Death
- Report of Fetal Death
- Application for Marriage License
- Monthly Report of Divorces and Annulments of Marriages Granted
- Induced Termination of Pregnancy (ITOP)
- Declaration of Paternity Affidavit

Suggestions and comments on alternate methods of data presentation are welcome. Forward any suggestions to the following address:

## APPENDIX B (Cont'd) RATES AND RATIOS

The impact of variation must be considered in evaluating categories with small frequencies. For example, a small change in the number of infant deaths in a county can disproportionately affect the infant mortality rate for that county. Rates for cities and counties therefore require special consideration. State rates with larger frequencies provide more accurate data overall.

Rates used in this report are calculated with the estimated 2012 population figures from the U.S. Department of Commerce, Bureau of the Census.

Birth Rate (Crude) =	$\frac{\text{Number of live births}}{\text{Population}}$	X	1,000
Fertility Rate =	$\frac{\text{Number of live births to women aged 15-44}}{\text{Number of women aged 15-44}}$	X	1,000
Teenage Fertility Rate =	$\frac{\text{Number of live births to women aged 15-19}}{\text{Number of women aged 15-19}}$	X	1,000
Death Rate (Crude) =	$\frac{\text{Number of deaths}}{\text{Population}}$	X	1,000
Cause of Death Rate =	$\frac{\text{Number of deaths from a stated cause}}{\text{Population}}$	X	100,000
Infant Death Rate =	$\frac{\text{Number of infant deaths}}{\text{Number of live births}}$	X	1,000
Neonatal Death Rate =	$\frac{\text{Number of neonatal deaths}}{\text{Number of live births}}$	X	1,000
Fetal Death Ratio =	$\frac{\text{Number of fetal deaths}}{\text{Number of live births}}$	X	1,000
Maternal Death Rate =	$\frac{\text{Number of maternal deaths}}{\text{Number of live births}}$	X	100,000

## APPENDIX B (Cont'd) DEFINITIONS

BIRTHWEIGHT - The weight of the fetus or infant at the time of delivery.

CAUSE OF DEATH - The underlying cause of death/condition giving rise to the chain of events leading to death.

FETAL DEATH (STILLBIRTH) - Death prior to the complete expulsion or extraction from its mother of a product of conception weighing at least 350 grams or more or having passed through at least the 20th week of gestation if the weight is unknown.

INDUCED TERMINATION OF PREGNANCY (ITOP) - The purposeful interruption of an intrauterine pregnancy with the intention other than to produce a live-born infant that does not result in live birth. This excludes management of prolonged retention of products of conception following fetal death.

INFANT DEATH - The death of a live-born infant before one year of age.

LIVE BIRTH - A live birth is the complete expulsion or extraction from its mother of a result of conception, irrespective of the duration of pregnancy, which, after such separation, breathes or shows any other evidence of life, such as beating of the heart, pulsation of umbilical cord, or definite movement of voluntary muscles.

LOW BIRTHWEIGHT - A weight at birth of less than 2,500 grams or 5 lbs., 8 oz.

MATERNAL DEATH – For the purpose of this publication, it is the death of a woman while pregnant or within 42 days of termination of pregnancy. This is irrespective of the duration and site of the pregnancy or its management but not from accidental or incidental causes. ICD-10 codes A34, O00-O95, O98-O99.

NEONATAL DEATH - The death of a live-born infant that occurs within the first 27 days of life.

OCCURRENCE DATA - Vital statistics compiled on the basis of where the vital event actually occurred.

PATERNITY AFFIDAVIT- A legal document signed by both parents declaring the paternity of their child.

POSTNEONATAL DEATH - The death of a live-born infant that occurs after the 27th day of life but before one year of age.

## APPENDIX B (Cont'd)

RESIDENCE DATA – Vital statistics compiled on the basis of the usual place of residence of the person(s) to whom the vital event occurred. For births and fetal deaths residence is defined as the mother's usual place of residence.

UNEMANCIPATED MINOR – For the purpose of this publication and reporting of Induced Termination of Pregnancy (ITOP), any person under the age of 18 years who has not graduated from high school and is neither married nor who has been otherwise emancipated.
