FOREWORD

The *West Virginia Vital Statistics 2014* publication provides an in-depth look at births, deaths, marriages and divorces that occurred among state residents in 2014. Beginning with the 2008 edition, state, county and city sections are presented separately. Please see the Table of Contents for further reference.

West Virginia had a natural decrease in population (excess of deaths over births) for the seventh year in a row. West Virginia dropped in overall population between 2013 and 2014 but 15 of the 55 counties gained population.

The number of total births decreased (20,829 to 20,303) from 2013 to 2014 while the births to teenage mothers also decreased. Births to unmarried mothers dropped slightly in 2014 compared to 2013, as more than two out of every five births still continue to occur out of wedlock. Among the unmarried mothers giving birth in West Virginia, a father was established through a paternity affidavit in 71.8% of these births, increasing from 70.7% in 2013.

Of the women who gave birth in 2014, 77.3% received prenatal care during the first trimester of pregnancy while 27.9% smoked during pregnancy. The percentage of low birthweight babies decreased in 2014 going from 9.4% in 2013 to 9.1%. In 2014, 35.3% of all babies were delivered by Cesarean section.

The number of deaths increased by 318 in 2014. The average age at death for West Virginians was 69.1 for men and 75.2 for women. Cancer, which became the leading cause of death in West Virginia for the first time ever in 2013, heart disease, chronic lower respiratory disease and accidents were the four leading causes of death, accountable for 56.5% of all deaths in West Virginia. Motor vehicle traffic accident deaths decreased by seven in 2014, from 332 to 325.

The infant death rate dropped from 7.5 per 1,000 live births in 2013 to 7.1 in 2014. The majority (79.9%) of infant deaths was due to conditions originating in the perinatal period, congenital malformations and SIDS (Sudden Infant Death Syndrome). The fetal death ratio increased from 5.2 per 1,000 live births in 2014 compared to 4.5 in 2013. Almost all (85.7%) of fetal deaths were due to conditions originating in the perinatal period.

Induced termination of pregnancy (ITOP) or induced abortion was added to this publication beginning in 2005. This section contains data of those terminations performed in West Virginia only. There were 1,730 ITOPs performed in the state in 2014 compared with 1,876 in 2013. In 2014, 65 of these procedures involved a minor under the age of 18 compared with 85 in 2013.

West Virginia law made allowance for same-sex marriages beginning in October 2014. However, overall marriages decreased for the third year in a row, from 12,382 in 2013 to 12,356. Divorces also decreased from 8,542 in 2013 to 7,785 in 2014.

Because of limited funds and the high cost of printing, please make copies of this publication and share it with others. Please note that these data can be accessed online later in the year at <http://www.wvdhhr.org/bph/hsc/statserv/> along with other statistical publications. If you need any additional information, please contact the Health Statistics Center at (304) 558-9100 or visit online at <http://www.wvdhhr.org/bph/hsc/contactUs.asp>.

West Virginia Vital Statistics
Population

Population Summary

In 2014, 1,861 West Virginians were lost to the total population as a result of resident deaths exceeding resident births. The 2014 Census shows an overall decrease (approximately 0.1%) in the state's population since 2010, from 1,852,994 to 1,850,326. This decrease is the result of a mostly a natural decrease (excess of deaths over births) even though there has been a slight growth in the excess of immigration over outmigration during that span.

Even though there has been a decrease in the overall population from 2010 to 2014, almost one-third (16) of the state's 55 counties have shown an increase. Furthermore, forty percent (12) of the state's 30 largest cities have shown an increase in population since the 2010 Census.

The U.S. Census Bureau estimates the population during non-census years and can be found at www.census.gov. Updates are officially announced as of July 1 every year until the decennial census, which is on April 1. Every year, the actual estimates change from previous years, but vintage years are still available on their website.

West Virginia Population, 1925-2014

Exhibit 1

Year	Population	Change in Population	
		Years	Percentage Change
1925*	1,593,005		
1930	1,729,205	1925 to 1930	8.5%

West Virginia Vital Statistics
Births

Birth Summary

West Virginia's resident live births decreased by 526 or 2.5%, from 20,829 in 2013 to 20,303 in 2014. The 2014 birth rate also decreased 0.8% from 11.2 per 1,000 population in 2013 to 11.0. The U.S. 2014 birth rate was 12.5 live births per 1,000 population, increasing 0.8% from the 2013 rate of 12.5. As the graph below shows, West Virginia's birth rate has been well below the national rate since 1990. It continued its overall decline until 1996 and remained relatively stable from 1996 to 2006, 2008-2010 and 2012-2014 with a slight increase in 2007 and 2011.

The 2014 U.S. fertility rate of 62.9 live births per 1,000 women aged 15-44 was higher (0.8%) than the 2013 rate (62.4). West Virginia's fertility rate decreased 1.9%, from 61.5 in 2013 to 60.3 in 2014. A comparison of West Virginia and U.S. age-specific fertility rates is displayed below:

Fertility Rates* by Age Group West Virginia and United States, 2014					
15-19		20-44		Total (15-44)	
WV	U.S.**	WV	U.S.**	WV	U.S.**
36.3	24.2	64.5	70.2	60.3	62.9

*All fertility rates were calculated using 2014 estimated population, U.S. Department of Commerce, Bureau of the Census.

**National Center for Health Statistics, http://www.cdc.gov/nchs/data/nvsr/nvsr64/nvsr64_12.pdf

The fertility rate among women aged 15-19 in West Virginia was 50.0% higher than that among young women in the U.S. (36.3 vs. 24.2). The fertility rate among women aged 20-44 was lower by 8.1% in the state than in the nation (64.5 vs.70.2).

The number of births to teen mothers (ages 10-19) decreased by 193 (8.9%), from 2,173 in 2013 to 1,980 in 2014. This is the first time on record where teen births are below 2,000. The percentage of total births represented by teen births also decreased from 10.4% in 2013 to 9.8% in 2014. The lower fertility rate among older women, however, resulted in teenage births continuing to constitute a higher proportion of total births than was found nationally (6.3% in 2014).

The percentage of births occurring out of wedlock decreased for only the second time since 2000. However, more than two of every five (44.3%) West Virginia resident births were to unwed mothers, compared to 45.1% in 2012. The percentages of white and black births that occurred out of wedlock in West Virginia in 2014 were 43.3% and 74.1%, respectively, compared to 44.2% and 76.0% in 2013. In the U.S. in 2014, 29.2% of births to white mothers (non-Hispanic) and 70.9% of births to black mothers (non-Hispanic) occurred out of wedlock. The percentage of teen births to unmarried teen mothers in the state increased from 83.2% in 2013 to 85.1% in 2014.

There was a total of 1,854 low birthweight babies (those weighing less than 2,500 grams or 5½ pounds) born to West Virginia residents in 2014, 9.1% of all births. Of the 1,854 low birthweight infants, 1,246 or 67.2% were preterm babies born before 37 weeks of gestation. (Of all 2014 resident births with a known gestational age, 10.8% were preterm babies.) In 2014, 9.0% of babies born to white mothers and 12.2% of babies born to black mothers were low birthweight. Nationally, 8.0% of all infants weighed less than 2,500 grams at birth in 2014; 7.0% of births to white mothers (non-Hispanic) and 13.2% of births to black mothers (non-Hispanic) were of low birthweight.

In 2014, 77.3% of West Virginia mothers with known prenatal care began their care during the first trimester of pregnancy, compared with 83.2% of mothers nationwide in 2006 (the latest reliable data available). Among those with known prenatal care, 78.0% of white mothers began care during the first trimester; 68.1% of black mothers did so. (U.S. figures show that 88.1% of white mothers and 76.1% of black mothers had first trimester care.) No prenatal care was received by 0.9% of white mothers and 1.1% of black mothers.

More than one-fourth (27.9%) of the births in 2014 were to mothers who smoked during their pregnancies. National figures from 2014 show that 8.3% of women giving birth reported smoking during pregnancy. Among the state mothers who reported smoking during pregnancy, 14.0% of the babies born were low birthweight, compared with 7.2% among non-smoking mothers. More than one-third (35.3%) of 2014 state births were delivered by Cesarean section, compared with a national rate of 32.2%. One or more medical risk factors were reported in 38.0% of the state resident births in 2014. Maternal drug use during pregnancy was reported in 5.2% of all resident births in 2014 while one or more complications of labor and/or delivery were reported for 30.5% of the state resident births.

The statistics presented in this publication refer to resident data unless otherwise indicated. A resident birth is determined by the residence of the mother when she gives birth, i.e., if she lives in West Virginia. An occurrence birth is determined by where the mother gives birth. If a mother lives in West Virginia but gives birth in Delaware, that is defined as a West Virginia resident birth and will be included as part of West Virginia's resident statistics; however, it is considered a Delaware occurrence.

Data structure for births changed extensively in 2014. Prenatal care began is now determined by the date of mother's first prenatal visit compared to when she gave birth. In fact, some reported their prenatal care beginning before she became pregnant (which is still recorded as the first trimester in all applicable tables in this publication). Some medical risk factors were removed but two that were added has become notable. A mother having a previous cesarean section is now recorded as a medical risk factor but still is reported in this publication's applicable tables on method of delivery. Maternal drug use during pregnancy has been added to the medical risk factors. While complications of labor and/or delivery was previously all in one field, it is now a combination of select factors in three different fields; onset of labor, characteristics of labor and/or delivery and maternal morbidity.

Maternal smoking during pregnancy was previously self-reported. A mother was asked if she smoked during their pregnancy and if so was asked the average number per day. Maternal smoking now breaks it down by trimester to how often she smoked in her first three months of pregnancy, middle three months and last three months. It also asks if she smoked any during the three months before pregnancy but it is not a considerable factor on the maternal smoking tables in this publication.

There is more diversity in determining the race of the mother and/or father. The new structure allows more options and the ability to accurately report more than one race. The mother's marital status not only asks if the mother was married at any time during their pregnancy but it also asks if she had even been married. The mother's and/or father's education was asked previously by the number of years they were educated with 12 years being a high school graduate for example. It is now broken down factors such as 9th – 12th grade with no diploma, high school graduate, some college credit but no degree, etc.

Number and Rate of Resident Births (Compared to Deaths)
West Virginia, 1925-2014

West Virginia Vital Statistics
Deaths

Death Summary

The number of West Virginia resident deaths increased by 318, from 21,846 in 2013 to 22,164 in 2014. The state's crude death rate rose from 2013 at 11.8 per 1,000 population to 12.0 in 2014. The average age at death for West Virginians was 72.1 (69.1 for men and 75.2 for women), compared to the 2013 average of 72.1 (69.0 for men and 75.3 for women). In 2014, 122 West Virginia residents who died were age 100 or older. The oldest man was 104 years old while the oldest woman was 108 years old at the time of death.

Cancer, which is now the leading cause of death in the Mountain State for the second consecutive year; heart disease and chronic lower respiratory diseases are the three leading causes of death, accounting for 50.3% of West Virginia resident deaths in 2014. Compared with 2013, the number of state deaths due to cancer increased by 156 or 3.3% while heart disease deaths increased by 17 or 0.4%. Also on the rise in 2014 were stroke deaths, the fifth leading cause of death in West Virginia, which increased by 11.3% in 2014; and deaths caused by Alzheimer's disease increased by 31 or 5.3%. Chronic lower respiratory disease, the third leading cause, decreased by 13 or 0.8%; along with diabetes mellitus deaths, which decreased by 22 or 2.6%, influenza/pneumonia, which decreased by eleven (11) or 2.3%; and dementia, now the sixth leading cause of death in the Mountain State, decreased by 66 or 6.0%

Accidental deaths were the fourth leading cause of death for the eighth year in a row. The number of accidental deaths dropped by 28 (2.0%), from 1,411 in 2013 to 1,383 in 2014. Accidents were the leading cause of death for ages one through 44 years. Motor vehicle accident and accidental poisoning fatalities are the two leading causes of death for young adults aged 15 through 24, accounting for nearly forty percent (39.5%) of all deaths for this age group in 2014. Motor vehicle accident deaths decreased by seven or 2.1%, from 332 in 2013 to 325 in 2014. However, West Virginia's 2014 motor vehicle fatalities included seven children under five years of age, three more than 2013. Accidental poisoning deaths are still a major concern in West Virginia, as it increased by 39 (7.0%) from 555 in 2013 to 594 in 2014. Accidental poisoning accounted for over one-third (35.1%) of all deaths in the age group of 25-34. The vast majority of these deaths were due to both legal and illicit ingestion of prescription pharmaceuticals.

Suicides increased by 35, from 325 to 360 between 2013 and 2014. Male suicides increased by 11 or 4.1%, from 270 in 2013 to 281 in 2014; the number of female suicides (79) increased by 25 or 46.3% from 2013. Sixty-one percent (60.8%) of all suicide deaths were firearm related — 65.5% of male suicides and 44.3% of female suicides. The average age of death for a suicide victim in 2014 was 48.0 years. While suicide was the 12th leading cause of death overall, it was the second leading cause of death for ages 15-34. The number of suicides among persons aged 19 and under was 20 in 2014, six more than 2013 at 14.

Homicides increased by 28, from 76 in 2013 to 104 in 2014. Seventy of the homicide victims were male, 34 were female. The average age at death for a homicide victim in 2014 was 39.6 years. There were six homicide victims under the age of five in 2014, same as 2013. Over half (55.8%) of 2014 homicide deaths were due to firearms.

The statistics presented in this publication refer to resident data unless otherwise indicated. A resident death is determined by where the decedent last lived at the time of death. An occurrence death is determined by where the decedent died. If a person lived in West Virginia but died in Indiana, that is defined as a West Virginia resident death and will be included as part of West Virginia's resident statistics; however, it is considered an Indiana occurrence.

Years of Potential Life Lost (YPLL)

YPLL is a measure of mortality calculated as the difference between age 75 (an average life span) and the age at death. Using YPLL before age 75, the sum of YPLL across all causes of death represents the total YPLL for all persons dying before the age of 75. A person dying at the age of 30 would, therefore, contribute 45 years to the total YPLL ($75-30=45$). YPLL is an important tool in emphasizing and evaluating causes of premature death.

The YPLL from all causes increased 1.1%, from 177,893 YPLL in 2013 to 179,793 in 2014. The four leading causes of YPLL in 2014 were malignant neoplasms (36,858 YPLL), diseases of the heart (25,431 YPLL), non-motor vehicle accidents (24,072 YPLL) and suicides (9,895 YPLL). Combined, these four causes accounted for over half (53.6%) of all years of potential life lost in 2014. In comparison to 2013, YPLL attributable to malignant neoplasms decreased from 20.7% to 20.5% of the total YPLL, diseases of the heart remained the same at 14.1%, YPLL due to non-motor vehicle accidents decreased from 13.8% to 13.4%, and the percentage of total YPLL due to suicides increased from 4.8% to 5.5%.

West Virginia Vital Statistics
Infant & Fetal Deaths

Infant and Fetal Death Summary

Deaths of infants under one year of age decreased by 13, from 157 in 2013 to 144 in 2014. West Virginia's infant mortality rate also declined, from 7.5 per 1,000 live births in 2013 to 7.1 in 2014. The U.S. infant mortality rate was 5.8 in 2014.

The following table shows the decline in the national and state infant mortality rates from 1950 through 2014.

**1950 – 2014 Infant Mortality
West Virginia and United States
(Number and Rate per 1,000 Live Births)**

Year	West Virginia	United States
1950	31.4	29.2
1955	27.1	26.4
1960	25.3	26.0
1965	27.1	24.5
1970	23.3	20.0
1975	18.3	16.1
1980	11.8	12.6
1985	10.7	10.6
1990	9.8	9.1
1995	7.6	7.5
2000	7.6	6.9
2005	8.1	6.9
2006	7.4	6.7
2007	7.4	6.8
2008	7.7	6.6
2009	7.8	6.4
2010	7.3	6.1
2011	6.8	6.0
2012	7.3	6.0
2013	7.5	6.0
2014	7.1	5.8

The state's 2014 white infant mortality rate decreased from 7.3 in 2013 to 7.1 in 2014, while the rate for black infants decreased from 13.6 to 7.3 (see Statistical Variation in Appendix B, page 173). West Virginia's 2014 race-specific infant mortality rates and comparable U.S. rates are shown in the table on the following page.

**2014 West Virginia and United States
Infant Mortality by Race of Infant
(Number and Rate per 1,000 Live Births)**

Race of Infant	West Virginia		United States*	
	Number	Rate	Number	Rate
All Races	144	7.1	23,440	6.0
White	134	7.1	15,125	5.1
Black	5	7.3	7,123	11.2
Other	5	6.3	1,192	3.7

*Source: http://www.cdc.gov/nchs/data/nvsr/nvsr65/nvsr65_04.pdf

Approximately one out of seven (14.6%) infant deaths in 2014 was due to SIDS (sudden infant death syndrome). Nearly one in five (19.4%) was the result of congenital malformations, while 45.8% were due to certain conditions originating in the perinatal period, including disorders relating to short gestation and unspecified low birthweight (16.0%).

Neonatal/Postneonatal Deaths

The number of neonatal deaths dropped by one, from 93 in 2013 to 92 in 2014; the neonatal death rate remained the same at 4.5 deaths among infants aged less than 28 days per 1,000 live births in 2013 and 2014. Neonatal deaths comprised 63.9% of all West Virginia resident infant deaths in 2014, compared with 59.2% in 2013. The rate of postneonatal deaths dropped from 3.1 deaths per 1,000 neonatal survivors in 2013 to 2.6 in 2014. The 2014 U.S. neonatal death rate was 3.9, while the postneonatal rate was 1.9 deaths per 1,000 neonatal survivors.

Fetal Deaths

The 105 resident fetal deaths reported with a birthweight of at least 350 grams or occurring after 20 or more weeks of gestation (if the weight is unknown) in 2014 were 11 more than in 2013 (94). The fetal death ratio also increased, from 4.5 deaths per 1,000 live births in 2013 to 5.1 in 2014. The majority (85.7%) of fetal deaths was due to conditions originating in the perinatal period, including complications of placenta, cord and membrane (28.6%), maternal conditions (3.8%), maternal complications (9.5%), short gestation and low birthweight (7.6%) and other ill-defined perinatal conditions (27.6%). Congenital malformations accounted for 11.4% of all fetal deaths.

Fetal Deaths, Neonatal Deaths and Postneonatal Deaths: Number and Rate/Ratio
West Virginia Resident Deaths, 1925-2014

Table 28

Year	Fetal Deaths		Neonatal Deaths		Postneonatal Deaths		
	Number	Ratio per 1,000 Live Births	Number	Rate per 1,000 Live Births	Number	Rate per 1,000 Live Births	Rate per 1,000 Neonatal Survivors*

West Virginia Vital Statistics
**Induced Terminations
of Pregnancy (ITOP)**

Induced Terminations of Pregnancy (ITOP) Summary

The annual reporting of induced terminations of pregnancy (ITOP), also properly referred to as “induced abortion,” was mandated in the latest revision of the West Virginia Code. An ITOP is a purposeful interruption of an intrauterine pregnancy with the intention other than to produce a live-born infant and which does not result in a live birth. The management of prolonged retention of products of conception following fetal death is excluded. The major distinguishing feature of this event is the fact that it is “purposeful” rather than spontaneous. A spontaneous interruption of a pregnancy is also known as a fetal death or a spontaneous abortion or, more commonly, as a miscarriage or a stillbirth.

One of the primary differences between the reporting of ITOP statistics and birth and death statistics in this publication is that ITOP statistics reflect events that occurred in West Virginia. Due to exchange agreements with other states, births and deaths to West Virginia residents that occur elsewhere are reported back to the state, making it possible to ascertain the number of births and deaths among state residents in a given time frame regardless as to where the event occurred. Information on the number of West Virginia residents who obtain an ITOP in another state is infrequently reported back to West Virginia by the state where the procedure took place, normally due to restrictions within the other state’s legal code.

The only two free-standing clinics that perform ITOPs on demand in West Virginia are in Charleston, which makes the likelihood of out-of-state ITOPs greater in some regions of the state. It is unlikely that the majority of women living in the northern or eastern panhandles of the state seeks an ITOP in West Virginia. Due to known incomplete reporting, therefore, the procedures performed on West Virginia residents in other states have been excluded from the compiled statistics.

West Virginia legal code requires clinics to provide counseling and informational guidance to females seeking an abortion. All but four of the 2014 ITOP records indicate the female did, in fact, receive counseling, compared to all but three in 2013. There are some isolated incidents where the abortion needs to be informed due to a medical emergency. In 2014, there were two ITOPs performed due to a medical emergency, one more than 2013.

In 2014, there were 1,730 ITOPs performed in West Virginia, 106 or 7.8% fewer than in 2013 (1,876). Over six out of every seven (86.8%) ITOPs involved a West Virginia resident, while 6.3% were Ohio residents and 5.7% were residents of Kentucky, compared with 2013 percentages of 86.4%, 6.9% and 6.5%, respectively. The median age of women having an ITOP in 2014 was 24, compared to age 25 in 2013. There were 65 procedures in 2014 involving females under the age of 18, of which 82 were performed on unemancipated* minors, compared with 85 in 2013, of which 82 were performed on unemancipated minors. Nearly four out of every five (80.3%) of the 2014 ITOPs performed in West Virginia involved women who were not married at the time. Nearly one-third (31.8) of the 2014 ITOPs involved women who had never had a previous live birth, while 85.8% were to women who had two or fewer children. There were three ITOPs performed on a woman who had six or more children. Over sixty-three percent (63.1%) involved women for whom it was their first ITOP, while nearly all (95.2%) involved women who had two or fewer previous ITOPs. Nine ITOPs were performed upon women who previously had six or more ITOPs.

*For the purpose of ITOP reporting, unemancipated minor means any person under the age of 18 years who has not graduated from high school and is neither married nor who has been otherwise emancipated.

West Virginia Vital Statistics
Marriages & Divorces

Marriages

On October 9, 2014, state law allowed for people of the same sex to get married. Even with this new law taking part for less than a quarter of a year, the overall number of marriages in West Virginia decreased for the third year in a row, from 12,382 in 2013 to 12,356 in 2014. Of those 2014 marriages, 12,046 were male-female marriages while 310 were of the same sex. The marriage rate in 2014 was 6.7 per 1,000 population, same as 2013. The 2014 U.S. provisional rate was 6.9.

For male-female marriages in 2014, the median age was 28 for brides and 30 for grooms. The mode (most frequently reported age) for male-female marriages was 23 for brides and 25 for grooms. There were 82 brides and 20 grooms aged less than 18. There were 180 brides and 335 grooms over the age of 65. Also in 2014, there were 193 marriages in which the groom was 20 years or more older than the bride, while there were 23 marriages in which the bride was at least 20 years older.

For first marriages to those who were a male-female union, the median age for brides was 23; for grooms it was 25. The mode for first male-female marriages in West Virginia was also 23 for brides and 25 for grooms. All of West Virginia's brides and grooms less than 18 years of age were in their first marriage. There were five brides and seven grooms over the age of 65 for which it was a first marriage.

For the 310 same-sex marriages in the last three months of 2014, 123 were to two males and the remaining 187 were to two females. The median age for these same-sex marriages was 35; 40 for males, 32 for females. The mode (most frequently reported age) for same-sex marriages was 33; 41 for males, 31 for females. There were 24 same-sex marriages involving someone over the age of 65; 18 of those were males and the remaining six were females. State law requires same-sex partners to be at least 18 years of age.

Divorces and Annulments

The number of divorces and annulments decreased by 757 or 8.9%, from 8,542 in 2013 to 7,785 in 2014. The 2014 rate of 4.2 per 1,000 population was lower than the 2013 rate of 4.6.

Of the 7,785 divorces in West Virginia in 2014, the median duration of marriage was six years. More than one out of every five (21.3%) West Virginia divorces with a known duration in 2014 involved marriages lasting only two years or less; 7.8% involved marriages of 25 years or longer. There were five divorces involving a wife aged less than 18 and there were no husbands under age 18. During 2014, 141 divorces involved a wife aged 65 or older and 241 involved a husband in that age group.

More than one-half (54.8%) of the divorces involved no children under 18 years of age in the family, while one child was involved in 21.8% of all divorces and two children were involved in 16.8%. Six divorces involved six or more children.

Note Regarding Marriage and Divorce/Annulment Statistics

Statistics regarding marriage and divorce/annulments are by occurrence only. They include only those that occur within West Virginia regardless of where the couple resides.

West Virginia Vital Statistics
County-Level Data

County and City Summary

Beginning with the *West Virginia Vital Statistics 2008* report, the Health Statistics Center began separating county statistics from the state totals. Although the tables have been rearranged from previous publications, the same information is presented. The birth section is followed by information on deaths (including infant and fetal) and then marriages and divorces. Practically all of ITOP data is collected from two clinics, both in Kanawha County, and is reported as occurrence data. ITOP statistics displayed at the county or city level would be meaningless and misleading.

West Virginia Vital Statistics 2007 expanded the number of cities for which data were presented. Previously, data were included for the 15 cities in the state that had populations of 10,000 or more. Because some cities have dropped below that mark in the past decade or more, it was then decided to include data for the state's 25 most populated cities, regardless of the size of the population. It has now increased to the 30 most populated cities beginning with the 2010 edition.

West Virginia Vital Statistics

**Appendix B:
Methodology,
Rates/Ratios
and Definitions**

APPENDIX B METHODOLOGY

Data used to prepare this report are taken from birth and death certificates, fetal death reports, marriage applications, divorce reports, Induced Terminations of Pregnancy (ITOP) and paternity affidavits occurring in calendar year 2014 and filed in the state office of vital statistics prior to February 18, 2015. Vital events occurring to West Virginia residents in other states and tabulated by June 1, 2015, are also included in totals by residence.

Place of Residence vs. Place of Occurrence

Data on vital events can be reported in two ways: by county of residence or by county of occurrence. For example, 92 births occurred within the geographic confines of Mason County of which only so many were to mothers who reside in Mason County; the remainder resides in other counties or states. Resident births for the county for 2014 totaled 280 which include 41 births that occurred in Mason County and 239 births to Mason County residents that occurred elsewhere. With the exception of Tables 11, 12, 13, 14, 16, 46 and Exhibit 9, natality data presented in this report are based on place of residence and resident populations are used to calculate rates.

With the exception of Table 19 and the second page of Table 54, mortality data are similarly reported by place of residence.

Statistical Variation

All statistics contain variations that are the result of chance, error, or omission. This characteristic is of particular importance in classifications of events with small numbers, in which small variations are proportionately large in relation to base figures. For example, small changes in the number of deaths or births in small population areas or in the number of deaths from uncommon causes could result in large changes in the respective rates. For this reason, rates for counties with small populations or other small bases should be used with caution.

Table 31 presents the number of infant deaths by race of mother while the table on page 76 in the summary has the number of infant deaths by race of infant.

Geographic Classification

The county has been used as the basic unit of tabulation throughout this report. Data have also been supplied for public health management districts and for the total state. In some instances, data have been supplied for individual cities.

APPENDIX B (Cont'd)

Cause of Death Classification

The cause of death is coded from information contained in the medical certification section of the death certificate. This portion of the certificate is completed by the attending physician. In the case of unattended death, the medical examiner is responsible for investigation and certification.

Effective in 1999, the National Center for Health Statistics and the World Health Organization adopted the *Tenth Revision of the International Classification of Diseases Adapted for Use in the United States, 1999 (ICD-10)*. The deaths with codes A00 through T98 and Z00-Z99 were coded using the "nature of injury" causes, while those with codes V01 through Y98 were coded using the "external cause" of death. The external codes are used to indicate a death due to an external rather than an internal cause.

In several tables, individual causes of death have been grouped into important selected causes of death. See Appendix A, Page 159, "Groupings of ICD-10 Codes," for a listing of the selected causes of death.

Population

The rates given in this publication were calculated using the 2014 population estimated figures from the U.S. Department of Commerce, Bureau of the Census. This can be found on the Internet at <http://www.census.gov/popest/data/index.html>. Detailed population figures are stored under American FactFinder.

Forms

The following is a list of the certificates and forms used in obtaining the data used in this publication.

- Certificate of Live Birth
- Physician's/Medical Examiner's Certificate of Death
- Report of Fetal Death
- Application for Marriage License
- Monthly Report of Divorces and Annulments of Marriages Granted
- Induced Termination of Pregnancy (ITOP)
- Declaration of Paternity Affidavit

Suggestions and comments on alternate methods of data presentation are welcome. Forward any suggestions to the following address:

APPENDIX B (Cont'd) RATES AND RATIOS

The impact of variation must be considered in evaluating categories with small frequencies. For example, a small change in the number of infant deaths in a county can disproportionately affect the infant mortality rate for that county. Therefore, rates for cities and counties require special consideration. State rates with larger frequencies provide more accurate data overall.

Rates used in this report are calculated with the estimated 2012 population figures from the U.S. Department of Commerce, Bureau of the Census.

Birth Rate (Crude) =	$\frac{\text{Number of live births}}{\text{Population}}$	X	1,000
Fertility Rate =	$\frac{\text{Number of live births to women aged 15-44}}{\text{Number of women aged 15-44}}$	X	1,000
Teenage Fertility Rate =	$\frac{\text{Number of live births to women aged 15-19}}{\text{Number of women aged 15-19}}$	X	1,000
Death Rate (Crude) =	$\frac{\text{Number of deaths}}{\text{Population}}$	X	1,000
Cause of Death Rate =	$\frac{\text{Number of deaths from a stated cause}}{\text{Population}}$	X	100,000
Infant Death Rate =	$\frac{\text{Number of infant deaths}}{\text{Number of live births}}$	X	1,000
Neonatal Death Rate =	$\frac{\text{Number of neonatal deaths}}{\text{Number of live births}}$	X	1,000
Fetal Death Ratio =	$\frac{\text{Number of fetal deaths}}{\text{Number of live births}}$	X	1,000
Maternal Death Rate =	$\frac{\text{Number of maternal deaths}}{\text{Number of live births}}$	X	100,000

APPENDIX B (Cont'd) DEFINITIONS

BIRTHWEIGHT - The weight of the fetus or infant at the time of delivery.

CAUSE OF DEATH - The underlying cause of death/condition giving rise to the chain of events leading to death.

FETAL DEATH (STILLBIRTH) - Death prior to the complete expulsion or extraction from its mother of a product of conception weighing at least 350 grams or more or having passed through at least the 20th week of gestation if the weight is unknown.

INDUCED TERMINATION OF PREGNANCY (ITOP) - The purposeful interruption of an intrauterine pregnancy with the intention other than to produce a live-born infant that does not result in live birth. This excludes management of prolonged retention of products of conception following fetal death.

INFANT DEATH - The death of a live-born infant before one year of age.

LIVE BIRTH - A live birth is the complete expulsion or extraction from its mother of a result of conception, irrespective of the duration of pregnancy, which, after such separation, breathes or shows any other evidence of life, such as beating of the heart, pulsation of umbilical cord, or definite movement of voluntary muscles.

LOW BIRTHWEIGHT - A weight at birth of less than 2,500 grams or 5 lbs., 8 oz.

MATERNAL DEATH - For the purpose of this publication, it is the death of a woman while pregnant or within 42 days of termination of pregnancy. This is irrespective of the duration and site of the pregnancy or its management but not from accidental or incidental causes. ICD-10 codes A34, O00-O95, O98-O99.

NEONATAL DEATH - The death of a live-born infant that occurs within the first 27 days of life.

OCCURRENCE DATA - Vital statistics compiled on the basis of where the vital event actually occurred.

PATERNITY AFFIDAVIT- A legal document signed by both parents declaring the paternity of their child.

POSTNEONATAL DEATH - The death of a live-born infant that occurs after the 27th day of life but before one year of age.

APPENDIX B (Cont'd)

RESIDENCE DATA – Vital statistics compiled on the basis of the usual place of residence of the person(s) to whom the vital event occurred. For births and fetal deaths, residence is defined as the mother's usual place of residence.

UNEMANCIPATED MINOR – For the purpose of this publication and reporting of Induced Termination of Pregnancy (ITOP), any person under the age of 18 years who has not graduated from high school and is neither married nor who has been otherwise emancipated.

MALE-FEMALE MARRIAGE – For the purpose of this publication and reporting of marriages, where the groom is actually a male who is marrying a female bride.

SAME-SEX MARRIAGE – For the purpose of this publication and reporting of marriages, where both partners are of the same sex; male is marrying another male, female is marrying another female.
