

WEST VIRGINIA VITAL STATISTICS 2019

SEVENTY-THIRD ANNUAL REPORT

WEST VIRGINIA VITAL STATISTICS 2019

Jim Justice
Governor

Bill J. Crouch
Cabinet Secretary
West Virginia Department of Health and Human Resources

Ayne Amjad, MD, MPH
Commissioner and State Health Officer
Bureau for Public Health

Amy D. Atkins, MPA
Deputy Commissioner, Health Improvement
Bureau for Public Health

Birgit A. Shanholtzer, MA
Director
Health Statistics Center
Bureau for Public Health

Matthew R. Wickert, BS
State Registrar
Health Statistics Center

R. Douglas Thompson,
Deputy State Registrar
Health Statistics Center

Tom Light, Primary Author
2018 WV Vital Statistics

Statistical Staff Contributing to This Report

Tonya A. Chaney, MA, Division of Epidemiology Manager
Allysa B. Crews, MS, Epidemiologist

All individuals listed were in office at time of report distribution

FOREWORD

The *West Virginia Vital Statistics 2019* publication provides an in-depth look at births, deaths, Induced Terminations of Pregnancy (ITOPs), infant deaths, fetal deaths, marriages and divorces that occurred among state residents in 2019.

West Virginia had a natural decrease in population (excess of deaths over births) for the twelfth year in a row. West Virginia dropped in overall population between 2018 and 2019 and only five of the 55 counties gained population.

The number of births decreased (18,243 to 18,090) from 2018 to 2019. In 2015, state births dropped below 20,000 for the first time on record. The births to teenage mothers also decreased. Births to unmarried mothers rose again in 2019 as more than two out of every five births continue to occur out of wedlock. Among the unmarried mothers giving birth in West Virginia, a father was established through a paternity affidavit in 71.8% of these births, increasing from 71.0% in 2018.

Of the women who gave birth in 2019, 79.9% received prenatal care during the first trimester of pregnancy while 23.0% smoked during pregnancy. The percentage of low birthweight babies increased from 9.4% in 2018 to 9.8% in 2019. In 2019, 34.2% of all babies were delivered by Cesarean section.

The number of deaths decreased by 171 in 2019 as compared to 2018. The average age at death for West Virginians was 69.4 for men and 75.1 for women. Heart disease, the leading cause of death in West Virginia for the fourth consecutive year, cancer, accidents, and chronic lower respiratory disease were the four leading causes of death, accounting for 56.8% of all deaths among West Virginia residents. Motor vehicle traffic accident deaths decreased by only 3 in 2019, from 333 to 330.

The infant death rate decreased from 7.0 per 1,000 live births in 2018 to 6.2 in 2019. The number of deaths to infants under one year of age decreased by 16 from 128 to 112. Over 80.0% of infant deaths (82.1%) were due to conditions originating in the perinatal period, congenital malformations, and SUIDS (Sudden Unexplained Infant Death Syndrome). The fetal death ratio decreased from 5.6 per 1,000 live births in 2018 to 4.8 in 2019. Almost all (87.2%) of fetal deaths were due to conditions originating in the perinatal period.

The ITOP section contains statistics for terminations performed in West Virginia only. There were 1,332 ITOPs performed in the state in 2019 compared with 1,508 in 2018. In 2019, 43 of these procedures involved a minor under the age of 18 compared with 42 in 2018.

The number of marriages decreased for the eighth year in a row, from 10,950 in 2018 to 10,705. Divorces increased from 5,879 in 2018 to 6,535 in 2019.

Because of limited funds and the high cost of printing, please make copies of this publication and share it with others. Please note that these data can be accessed online later in the year at www.wvdhhr.org/bph/hsc/statserv along with other statistical publications. If you need additional information, please contact the Health Statistics Center at (304) 558-9100 or request online at www.wvdhhr.org/bph/hsc/contactUs.asp.

Oldest Male Decedent: 105
 Oldest Female Decedent: 110
 Number of Male Decedents 100 Yrs. & Older: 22
 Number of Female Decedents 100 Yrs. & Older: 113
 Day Most Deaths Occurred: October 27 - (92)
 Day Fewest Deaths Occurred: August 27 - (36)

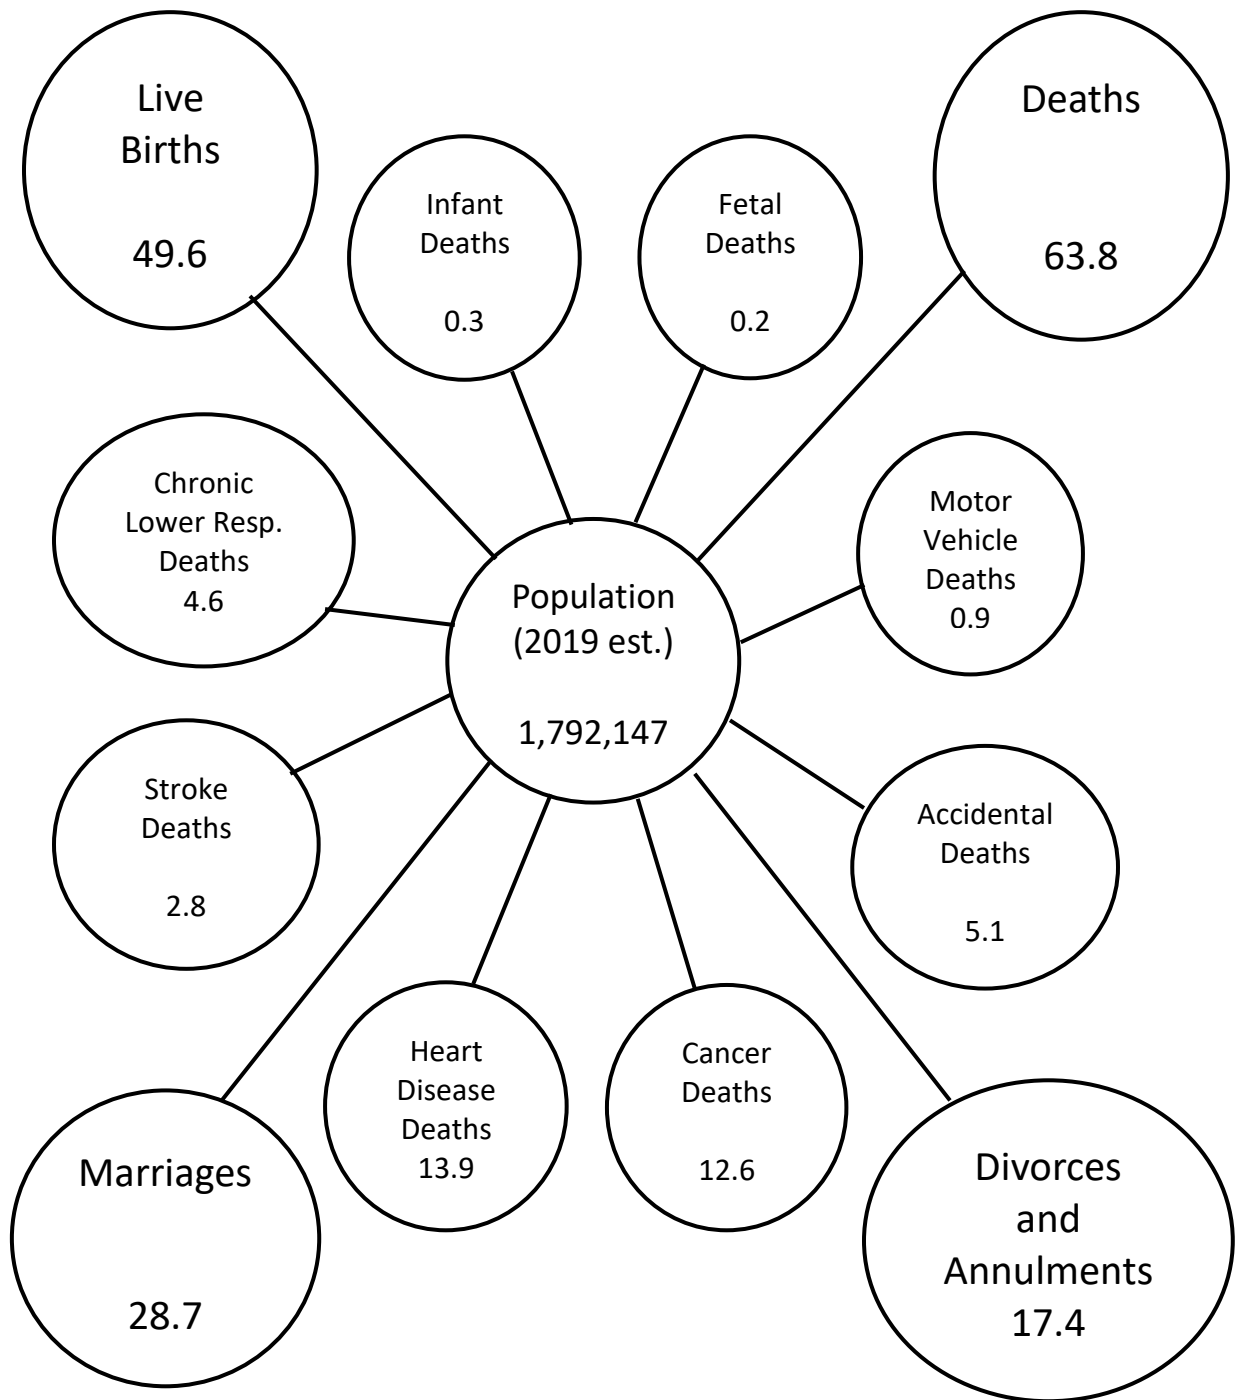

Marriage (Male-Female Marriages Only)

Oldest Groom: 95
 Youngest Groom: 15
 Oldest Bride: 86
 Youngest Bride: 16
 Largest Age Difference with Bride Older: 40 Years
 Largest Age Difference with Groom Older: 44 Years

Divorce (Male-Female Divorces Only)

Oldest Male Divorcé: 92
 Youngest Male Divorcé: 18
 Oldest Female Divorcée: 88
 Youngest Female Divorcée: 17
 Marriage of Longest Duration Ending in Divorce: 60 Years

Average Day Statistics West Virginia, 2019

West Virginia Vital Statistics
Population

Population Summary

In 2019, 5,201 West Virginians were lost to the total population as a result of resident deaths exceeding resident births. The U.S. Census Bureau shows an overall decrease (approximately 3.3%) in the state's population since 2010, from 1,852,994 to 1,792,147. This decrease is the result of a mostly natural decrease (excess of deaths over births) as well as a growth in the excess of outmigration over immigration during that span.

There has been a decrease in the overall population from 2010 to 2019; however, approximately one-eighth (7) of the state's 55 counties have shown an increase. Furthermore, a little more than one-fourth (14) of the state's 50 largest cities have shown an increase in population since the 2010 Census.

The U.S. Census Bureau estimates the population during non-census years and can be found at www.census.gov. Updates are officially announced as of July 1 every year until the decennial census, which is on April 1. Every year, the actual estimates change from previous years, but vintage years are still available on their website.

West Virginia Population, 1925-2019

Exhibit 1

Year	Population	Change in Population	
		Years	Percentage Change
1925*	1,593,005		
1930	1,729,205	1925 to 1930	8.5%

West Virginia Vital Statistics
Births

Birth Summary

West Virginia's resident live births decreased by 153 or 0.8%, from 18,243 in 2018 to 18,090 in 2019. This is the fifth year in a row where births are below 20,000. The 2019 birth rate remained the same as 2018 at 10.1 per 1,000 population. The U.S. 2019 birth rate was 11.4 live births per 1,000 population, decreasing 1.8% from the 2018 rate of 11.6. As the graph below shows, West Virginia's birth rate has been well below the national rate since 1990. It continued its overall decline until 1996 and remained relatively stable from 1996 to 2006, decreased from 2008-2010 and 2012-2019 with a slight increase in 2007 and 2011.

The 2019 U.S. fertility rate of 58.3 live births per 1,000 women aged 15-44 was lower (1.4%) than the 2018 rate (59.1). West Virginia's fertility rate increased marginally (0.3%), from 57.2 in 2018 to 57.4 in 2019. A comparison of West Virginia and U.S. age-specific fertility rates is displayed below.

Fertility Rates* by Age Group West Virginia and United States, 2019					
15-19		20-44		Total (15-44)	
WV	U.S.**	WV	U.S.**	WV	U.S.**
25.1	16.7	63.4	66.0	57.4	58.3

*All fertility rates were calculated using 2019 estimated population, U.S. Department of Commerce, Bureau of the Census.

**CDC Wonder, <http://wonder.cdc.gov/>

The fertility rate among women aged 15-19 years in West Virginia was 25.1 compared to the U.S. rate of 16.7, a difference of 40.2%. The fertility rate among women aged 20-44 years in West Virginia was 63.4 compared to the U.S. rate of 66.0, a difference of 4.0%. The fertility rate percentage difference among all women of childbearing ages (15-44) was 1.6% (57.4 vs. 58.3).

The number of births to teen mothers (ages 10-19) decreased by 28 (2.1%), from 1,321 in 2018 to 1,293 in 2019. This is the sixth year in a row where teen births have been below 2,000. The percentage of total births represented by teen births also decreased from 7.2% in 2018 to 7.1% in 2019. The lower fertility rate among older women, however, resulted in teenage births continuing to constitute a higher proportion of total births than was found nationally (4.6% in 2019).

The percentage of births occurring out of wedlock increased in 2019. Nearly half (46.4%) of West Virginia resident births were to unwed mothers compared to 45.4% in 2018. The percentages of white and black births that occurred out of wedlock in West Virginia in 2019 were 45.0% and 75.0%, respectively, compared to 44.3% and 72.5% in 2018. In the U.S. in 2019, 29.1% of births to white mothers (non-Hispanic) and 70.3% of births to black mothers (non-Hispanic) occurred out of wedlock. The percentage of teen births to unmarried teen mothers in the state increased from 88.1% in 2018 to 89.1% in 2019.

There were a total of 1,775 low birthweight babies (those weighing less than 2,500 grams or 5½ pounds) born to West Virginia residents in 2019, 9.8% of all births. Of the 1,775 low birthweight infants, 1,223 or 68.9% were preterm babies born before 37 weeks of gestation. Of all 2019 resident births with a known gestational age, 12.6% were preterm babies. In 2019, 9.5% of babies born to white mothers and 17.3% of babies born to black mothers were low birthweight. Nationally, 8.3% of all infants weighed less than 2,500 grams at birth in 2019; 6.9% of births to white mothers (non-Hispanic) and 13.9% of births to black mothers (non-Hispanic) were of low birthweight.

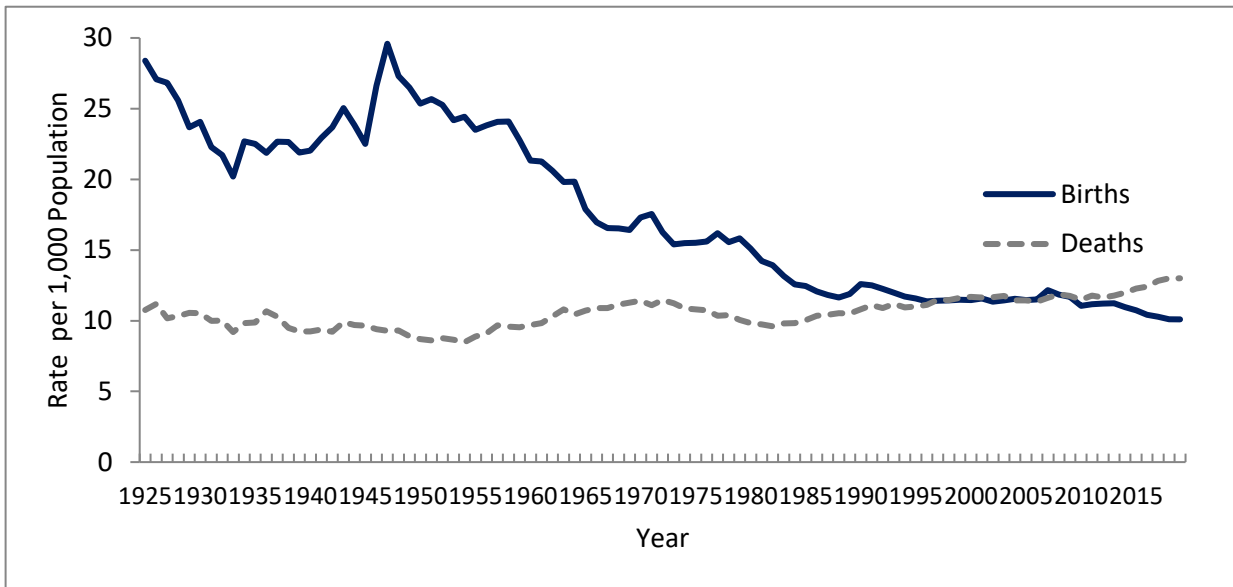

In 2019, 79.9% of West Virginia mothers with known prenatal care began their care during the first trimester of pregnancy, compared with 77.6% of mothers nationwide. Among those with known prenatal care, 80.4% of white mothers began care during the first trimester and 74.6% of black mothers did so. U.S. figures show that 82.7% of white, non-Hispanic mothers and 67.8% of black, non-Hispanic mothers had first trimester care. No prenatal care was received by 1.9% of white mothers and 2.7% of black mothers in West Virginia.

Over one in five (23.0%) births in 2019 were to mothers who smoked during their pregnancy. National figures from 2019 show that 6.0% of women giving birth reported smoking during pregnancy. Among the West Virginia mothers who reported smoking during pregnancy, 16.4% of the babies born were low birthweight, compared with 7.8% among non-smoking mothers. More than one-third (34.2%) of 2019 state births were delivered by Cesarean section, compared with a national rate of 31.7%. One or more medical risk factors were reported in 43.7% of the state resident births in 2019 and one or more complications of labor and/or delivery were reported for 37.3% of the state resident births. Maternal drug use during pregnancy was reported in 8.5% of all resident births in 2019.

The statistics presented in this publication refer to resident data unless otherwise indicated. A resident birth is determined by the residence of the mother when she gives birth, i.e., if she lives in West Virginia. An occurrence birth is determined by where the mother gives birth. If a mother lives in West Virginia but gives birth in Michigan, that is defined as a West Virginia resident birth and will be included as part of West Virginia's resident statistics; however, it is considered a Michigan occurrence.

Number and Rate of Resident Births (Compared to Deaths) West Virginia, 1925-2019

West Virginia Vital Statistics
Deaths

Death Summary

The number of West Virginia resident deaths decreased by 171, from 23,462 in 2018 to 23,291 in 2019. The state's crude death rate remained the same at 13.0 per 1,000 population in 2018 and 2019. The average age at death for West Virginians was 72.1 (69.4 for men and 75.1 for women), compared to the 2018 average of 72.0 (69.0 for men and 75.2 for women). In 2019, 135 West Virginia residents who died were 100 or older. The oldest man was 105 years old while the oldest woman was 110 years old at the time of death.

Heart disease was the leading cause of death in the Mountain State for the fourth straight year. Heart disease, cancer, and accidental deaths were the three leading causes of death, accounting for 49.7% of West Virginia resident deaths in 2019. Compared with 2018, the number of state deaths due to heart disease increased by 70 or 1.4% while cancer deaths decreased by 79 or 1.7%. Also on the rise in 2019 were chronic liver disease and cirrhosis, which increased by 10.5% in 2019. Alzheimer's disease remained the eighth leading cause of death in West Virginia increasing by 40 or 5.1%. Deaths due to stroke, which remained the fifth leading cause of death, increased by 40 or 4.0%. Diabetes mellitus deaths increased by 20 or 2.1% and dementia, the seventh leading cause of death in the Mountain State increased by 11 or 1.2%. Deaths due to influenza and pneumonia decreased by 142 (26.3%) and nephritis, nephrotic syndrome and nephrosis deaths decreased by 77 or 15.7%.

Accidental deaths were the third leading cause of death in West Virginia for the first time since 2017. The number of accidental deaths rose by 163 (9.5%), from 1,713 in 2018 to 1,876 in 2019. Accidents were the leading cause of death for ages one through 44 years. Motor vehicle accidents and accidental poisoning fatalities were the two leading causes of death for young adults aged 15 through 24, accounting for nearly half (44.3%) of all deaths for this age group in 2019. Motor vehicle accident deaths decreased by only three or 0.9%, from 333 in 2018 to 330 in 2019. West Virginia's 2019 motor vehicle fatalities included two children under five years of age, five fewer than 2018. Accidental poisoning deaths were still a major concern in West Virginia, as they increased by 33 (4.0%) from 835 in 2018 to 868 in 2019. Accidental poisoning accounted for forty percent (40.5%) of all deaths in the age group of 25-34.

Suicides decreased by 71, from 404 to 333 between 2018 and 2019. Male suicides decreased by 61 or 19.0%, from 321 in 2018 to 260 in 2019. The number of female suicides (73) was ten less or 12.0% than the 83 in 2018. Nearly sixty percent (59.8%) of all suicide deaths were firearm related; 63.5% of male suicides and 46.6% of female suicides. The average age of death for suicide in 2019 was 46.3 years. While suicide was the 13th leading cause of death overall, it was the second leading cause of death for ages 15-34. The number of suicides among persons aged 19 and under was 19 in 2019, five more than 2018.

Homicides decreased by seven or 6.8%, from 103 in 2018 to 96 in 2019. Sixty-nine of the homicide victims were male, 27 were female. The average age at death for a homicide victim in 2019 was 37.8 years. There were no homicide victims under the age of five in 2019, compared to six in 2018. Over eighty percent (81.3%) of 2019 homicide deaths were due to firearms.

The statistics presented in this publication refer to resident data unless otherwise indicated. A resident death is determined by where the decedent last lived at the time of death. An occurrence death is determined by where the decedent died. If a person lived in West Virginia but died in Wisconsin, that is defined as a West Virginia resident death and will be included as part of West Virginia's resident statistics; however, it is considered a Wisconsin occurrence.

Whether or not tobacco was a contributory factor was not reported for over half of 2019 resident deaths. Where it was reported, tobacco was either a definite or a probable contributing factor, in nearly one-third (30.7%) of deaths. There were 532 resident deaths among women of childbearing age, 15-44, with nineteen (3.6%) of those women reported as either being pregnant at the time or within one year of their death. However, 65 of the deaths had an unknown or no listing. Over half (58.5%) of the 330 motor vehicle accident deaths reported whether a seatbelt was worn. Only 38.3% of those deaths reported a seatbelt was worn at the time of death. The transportation role was more accurately reported with 295 (89.4%) of the motor vehicle deaths. Under two-thirds (65.4%) of the motor vehicle fatalities were the driver and over twenty percent (21.0%) were the passenger. The remaining 13.6% involved a pedestrian or some other role.

Years of Potential Life Lost (YPLL)

The YPLL is a measure of mortality calculated as the difference between age 75 (an average life span) and the age at death. Using YPLL before age 75, the sum of YPLL across all causes of death represents the total YPLL for all persons dying before the age of 75. A person dying at the age of 22 would, therefore, contribute 53 years to the total YPLL (75-22=53). YPLL is an important tool in emphasizing and evaluating causes of premature death.

The YPLL from all causes decreased 1.9%, from 189,635 YPLL in 2018 to 185,950 in 2019. The four leading causes of YPLL in 2019 were non-motor vehicle accidents (33,492 YPLL), malignant neoplasms (32,781 YPLL), diseases of the heart (26,106 YPLL), and suicides (9,803 YPLL). Combined, these four causes accounted for over half (55.0%) of all years of potential life lost in 2019. In comparison to 2018, YPLL attributed to non-motor vehicle accidents increased from 17.1% to 18.0% of the total YPLL, malignant neoplasms decreased from 18.0% to 17.6%, YPLL due to diseases of the heart decreased from 14.1% to 14.0%, and the percentage of total YPLL due to suicides decreased from 5.9% to 5.3%.

Note: All percentage differences in this summary are calculated by using the previous year's result as the denominator.

West Virginia Vital Statistics
Infant & Fetal Deaths

Infant and Fetal Death Summary

Deaths of infants under one year of age decreased by 16 from 128 in 2018 to 112 in 2019. West Virginia's infant mortality rate also decreased (11.4%) from 7.0 per 1,000 live births in 2018 to 6.2 in 2019. The U.S. infant mortality rate was 5.6 in 2019.

The following table shows the decline in the national and state infant mortality rates from 1950 through 2019.

1950 – 2019 Infant Mortality West Virginia and United States (Number and Rate per 1,000 Live Births)

Year	West Virginia	United States
1950	31.4	29.2
1955	27.1	26.4
1960	25.3	26.0
1965	27.1	24.5
1970	23.3	20.0
1975	18.3	16.1
1980	11.8	12.6
1985	10.7	10.6
1990	9.8	9.1
1995	7.6	7.5
2000	7.6	6.9
2005	8.1	6.9
2010	7.3	6.1
2011	6.8	6.0
2012	7.3	6.0
2013	7.5	6.0
2014	7.1	5.8
2015	7.0	5.9
2016	7.3	5.8
2017	7.1	5.8
2018	7.0	5.7
2019	6.2	5.6

The state's 2019 white infant mortality rate decreased from 6.6 in 2018 to 5.7 in 2019, and the rate for black infants increased from 12.4 to 20.3. West Virginia's 2019 race-specific infant mortality rates and comparable U.S. rates are shown in the table on the following page.

**2019 West Virginia and United States
Infant Mortality by Race of Infant
(Number and Rate per 1,000 Live Births)**

Race of Infant	West Virginia		United States	
	Number	Rate	Number	Rate
All Races	112	6.2	20,921	5.6
White	96	5.7	12,586	4.5
Black	13	20.3	6,413	10.1
Other	3	4.3	1,922	6.5

*Source: <http://wonder.cdc.gov/>

West Virginia Bureau for Public Health
Health Statistics Center, Vital Statistics System, 2022

Approximately one out of five (18.8%) infant deaths in 2019 was due to SUIDS (sudden unexplained infant death syndrome). Over one in five (21.4%) was the result of congenital malformations, while 42.0% were due to certain conditions originating in the perinatal period, including disorders relating to short gestation and unspecified low birthweight (13.4%).

Neonatal/Postneonatal Deaths

The number of neonatal deaths dropped by four, from 78 in 2018 to 74 in 2019; the neonatal death rate also decreased from 4.3 deaths per 1,000 live births among infants aged less than 28 days in 2018 to 4.1 in 2019. Neonatal deaths comprised 66.1% of all West Virginia resident infant deaths in 2019, compared with 60.9% in 2018. The rate of postneonatal deaths declined from 2.8 deaths per 1,000 neonatal survivors in 2018 to 2.1 in 2019. The 2019 U.S. neonatal death rate was 3.7, while the postneonatal rate was 1.9 deaths per 1,000 neonatal survivors.

Fetal Deaths

Fetal deaths are registered when birthweight is at least 350 grams or if the weight is unknown, those occurring after 20 or more weeks gestation.

The 86 resident fetal deaths reported with a birthweight of at least 350 grams or occurring after 20 or more weeks of gestation (if the weight is unknown) in 2019 were 17 less than in 2018 (103). The fetal death ratio dropped from 5.6 deaths per 1,000 live births in 2018 to 4.8 in 2019. The majority (87.2%) of fetal deaths were due to conditions originating in the perinatal period,

including maternal conditions (0.5%), maternal complications (33.7%), short gestation and low birthweight (25.6%), and other ill-defined perinatal conditions (24.4%). There were two fetal deaths due to congenital malformations in 2019, 2.3% of the total.

West Virginia Vital Statistics
**Induced Terminations
of Pregnancy (ITOP)**

Induced Terminations of Pregnancy (ITOP) Summary

The annual reporting of induced termination of pregnancy (ITOP), was mandated in the W.Va. Code, beginning June 30, 2016. An ITOP is a purposeful interruption of an intrauterine pregnancy with the intention other than to produce a live-born infant and which does not result in a live birth. The management of prolonged retention of products of conception following fetal death is excluded. The major distinguishing feature of this event is the fact that it is “purposeful” rather than spontaneous. A spontaneous interruption of a pregnancy is also known as a fetal death, or a spontaneous abortion or, more commonly, as a miscarriage or a stillbirth.

One of the primary differences between the reporting of ITOP statistics and birth and death statistics in this publication is that ITOP statistics reflect events that occurred in West Virginia only. Due to exchange agreements with other states, births and deaths to West Virginia residents that occur elsewhere are reported back to the state, making it possible to ascertain the number of births and deaths among state residents in a given time frame regardless as to where the event occurred. Information on the number of West Virginia residents who obtain an ITOP in another state is infrequently reported back to West Virginia by the state where the procedure took place, normally due to restrictions within the other state’s legal code.

The only free-standing clinic that performs ITOPs on demand in West Virginia is in Charleston, which makes the likelihood of out-of-state ITOP greater in some regions of the state. It is unlikely that the majority of women living in the northern or eastern panhandles of the state seeks an ITOP in West Virginia. Due to known incomplete reporting, the procedures performed on West Virginia residents in other states have been excluded from the compiled statistics.

W.Va. Code §16-21-2 requires clinics to provide counseling and informational guidance to females seeking an abortion. All but one of the 2019 ITOP records indicate the female received counseling, compared to all but four in 2018. There are some isolated incidents where the ITOP needs to be performed due to a medical emergency. In 2019, there were five ITOP performed due to a medical emergency, compared to three in 2018.

In 2019, there were 1,332 ITOPs performed in West Virginia, 176 or 11.7% less than in 2018 (1,508). Over six out of every seven (86.6%) ITOPs involved a West Virginia resident, while 5.6% were Kentucky residents and 5.3% were residents of Ohio, compared with 2018 percentages of 86.2%, 6.0%, and 6.2%, respectively. The median age of women having an ITOP in 2019 was 26, compared to 25 in 2018. There were 43 procedures in 2019 involving females under the age of 18, of which 42 were performed (on unemancipated* minors, compared with 42 in 2018. More than four out of every five (83.0%) of the 2019 ITOPs performed in West Virginia involved women who were not married at the time. Over one in three (36.0%) of the 2019 ITOPs involved women who had never had a previous live birth, while 86.8% were to women who had two or fewer children. There were two ITOPs performed on women who had six or more children. Over sixty-one percent of ITOPs (61.3%) involved women for whom it was their first ITOP, while nearly all (95.5%) involved women who had two or fewer previous ITOPs. Nine ITOPs involved women who previously had six or more ITOPs.

*For the purpose of ITOP reporting, unemancipated minor means any person under the age of 18 years who has not graduated from high school and is neither married nor who has been otherwise emancipated.

**Induced Terminations of Pregnancy

West Virginia Vital Statistics
Marriages & Divorces

Marriages

As of October 9, 2014, same-sex marriage is legally recognized in West Virginia pursuant to the decision in *Bostic v. Schaefer*, 760 F.3d 352 (4th Cir. 2014). However, the overall number of marriages in West Virginia decreased for the eighth year in a row, from 10,950 in 2018 to 10,705 in 2019. Of those 2019 marriages, 10,467 were male-female marriages while 238 were of the same sex. The marriage rate in 2019 was 6.0 per 1,000 population, lower than 6.1 rate in 2018. The 2019 U.S. provisional rate was 6.1.

For male-female marriages in 2019, the median age was 29 for brides and 31 for grooms. The age mode (most frequently reported age) for male-female marriages was 22 for brides and 24 for grooms. There were 44 brides and 8 grooms aged less than 18. There were 235 brides and 384 grooms over the age of 65. Also in 2019, there were 161 marriages in which the groom was 20 years or more older than the bride, while there were 20 marriages in which the bride was at least 20 years older.

For first marriages to those who were a male-female union, the median age for brides was 24 and 26 for grooms. The age mode for first male-female marriages in West Virginia was 22 for brides and 24 for grooms. All 44 West Virginia brides and all eight grooms less than 18 years of age were in their first marriage. There were 10 brides and 13 grooms over the age of 65 for which it was a first marriage.

There were 238 same-sex marriages in 2019 compared to 215 in 2018. Of the 215 same-sex marriages in 2019, 59 were two males and the remaining 179 were two females. The median age for these same-sex marriages was 30; 29 for males, 30 for females. The mode age (most frequently reported age) for same-sex marriages was both 27 and 29; 25 for males, 24 for females. There were five same-sex marriages involving someone over the age of 65; two for males and three for females.

Divorces and Annulments

The number of reported divorces and annulments increased by 656 or 11.2%, from 5,879 in 2018 to 6,535 in 2019. The 2019 rate of 3.6 per 1,000 population was higher than the 2018 rate of 3.3.

Of all 6,535 reported divorces in West Virginia in 2019, the median duration of marriage was six years. Less than one out of every five (18.5%) West Virginia divorces with a known duration in 2018 involved marriages lasting only two years or less; 9.7% involved marriages of 25 years or longer. There were two divorces involving either a petitioner or respondent aged less than 18. During 2019, 216 divorces involved petitioner or respondent aged 65 or older.

More than one-half (55.5%) of the reported divorces involved no children under 18 years of age

in the family, while one child was involved in 20.4% of divorces and two children were involved in 17.2%. Five divorces involved six or more children.

Data structure changed in 2017 which allowed records of divorces involving same-sex couples. Of the 6,535 reported divorces and annulments, 166 involved same-sex couples. Of the 6,369 male-female divorces in West Virginia in 2019, the median duration of marriage was seven years. Eighteen percent of West Virginia male-female divorces with a known duration in 2019 involved marriages lasting two years or less; 9.9% involved marriages of 25 years or longer. There were two divorces involving a wife aged less than 18, but there were no divorces involving a husband in that age group. During 2019, 171 divorces involved a wife aged 65 or older and 255 involved a husband in that age group.

More than one-half (55.0%) of the male-female divorces involved no children under 18 years of age in the family, while one child was involved in 20.6% of male-female divorces and two children were involved in 17.5%. four male-female divorces involved six or more children.

Note Regarding Marriage and Divorce/Annulment Statistics

Statistics regarding marriage and divorce/annulments are by occurrence only. They include only those that occur within West Virginia regardless of where the couple resides. Marriage and divorce/annulment data are underreported.

West Virginia Vital Statistics
County-Level Data

County and City Summary

Beginning with the *West Virginia Vital Statistics 2008* report, the Health Statistics Center began separating county statistics from the state totals. Although the tables have been rearranged from previous publications, the same information is presented. The birth section is followed by information on deaths (including infant and fetal) and then marriages and divorces. The majority of Induced Termination of Pregnancy (ITOP) data are collected from one clinic and are reported as occurrence data. ITOP statistics displayed at the county or city level would be meaningless and misleading.

West Virginia Vital Statistics 2007 expanded the number of cities for which data were presented. Previously, data were included for the 15 cities in the state that had populations of 10,000 or more. Because some cities have dropped below that mark in the past decade or more, it was then decided to include data for the state's 25 most populated cities, regardless of the size of the population. It increased to the 30 most populated cities beginning with the 2010 edition. Beginning with the 2018 edition, it has further increased to the 50 most populated cities. Please note there could be different cities ranked in the top 50 from year to year.

West Virginia Vital Statistics

**Appendix B:
Methodology,
Rates/Ratios
and Definitions**

APPENDIX B METHODOLOGY

Data used to prepare this report are taken from birth and death certificates, fetal death reports, marriage applications, divorce reports, Induced Terminations of Pregnancy (ITOP) and paternity affidavits occurring in calendar year 2019 and filed in the state office of vital statistics prior to February 18, 2020. Vital events occurring to West Virginia residents in other states and tabulated by June 1, 2020, are also included in totals by residence.

Place of Residence vs. Place of Occurrence

Data on vital events can be reported in two ways: by county of residence or by county of occurrence. For example, 145 births occurred within the geographic confines of Marshall County of which only so many were to mothers who reside in Marshall County; the remainder resides in other counties or states. Resident births for the county for 2019 totaled 283 which include 63 births that occurred in Marshall County and 220 births to Marshall County residents that occurred elsewhere. With the exception of Tables 11, 12, 13, 14, 16, 57 and Exhibit 9, natality data presented in this report are based on place of residence and resident populations are used to calculate rates.

With the exception of Table 19 and the second page of Table 66, mortality data are similarly reported by place of residence.

Statistical Variation

All statistics contain variations that are the result of chance, error, or omission. This characteristic is of particular importance in classifications of events with small numbers, in which small variations are proportionately large in relation to base figures. For example, small changes in the number of deaths or births in small population areas or in the number of deaths from uncommon causes could result in large changes in the respective rates. For this reason, rates for counties with small populations or other small bases should be used with caution.

Geographic Classification

The state has been used as the basic unit of tabulation throughout this report however, statistics have been provided at the county and city level as appropriate.

APPENDIX B (Cont'd)

Cause of Death Classification

The cause of death is coded from information contained in the medical certification section of the death certificate. This portion of the certificate is completed by the attending physician. In the case of unattended death, the medical examiner is responsible for investigation and certification.

Effective in 1999, the National Center for Health Statistics and the World Health Organization adopted the *Tenth Revision of the International Classification of Diseases Adapted for Use in the United States, 1999 (ICD-10)*. The deaths with codes A00 through T98 and Z00-Z99 were coded using the “nature of injury” causes, while those with codes V01 through Y98 were coded using the “external cause” of death. The external codes are used to indicate a death due to an external rather than an internal cause.

In several tables, individual causes of death have been grouped into important selected causes of death. See Appendix A, Page 174, “Groupings of ICD-10 Codes,” for a listing of the selected causes of death.

Population

The rates given in this publication were calculated using the 2019 population estimated figures from the U.S. Department of Commerce, Bureau of the Census. This can be found at <http://www.census.gov/popest/data/index.html>. Detailed population figures are stored under American FactFinder.

Forms

The following is a list of the certificates and forms used in obtaining the data used in this publication.

- Certificate of Live Birth
- Physician’s/Medical Examiner’s Certificate of Death
- Report of Fetal Death
- Application for Marriage License
- Monthly Report of Divorces and Annulments of Marriages Granted
- Induced Termination of Pregnancy (ITOP)
- Declaration of Paternity Affidavit

Suggestions and comments on alternate methods of data presentation are welcome. Forward any suggestions to the following address:

APPENDIX B (Cont'd) RATES AND RATIOS

The impact of variation must be considered in evaluating categories with small frequencies. For example, a small change in the number of infant deaths in a county can disproportionately affect the infant mortality rate for that county. Therefore, rates for cities and counties require special consideration. State rates with larger frequencies provide more accurate data overall.

Rates used in this report are calculated with the estimated 2019 population figures from the U.S. Department of Commerce, Bureau of the Census.

Birth Rate (Crude) =	$\frac{\text{Number of live births}}{\text{Population}}$	X	1,000
Fertility Rate =	$\frac{\text{Number of live births to women aged 15-44}}{\text{Number of women aged 15-44}}$	X	1,000
Teenage Fertility Rate =	$\frac{\text{Number of live births to women aged 15-19}}{\text{Number of women aged 15-19}}$	X	1,000
Death Rate (Crude) =	$\frac{\text{Number of deaths}}{\text{Population}}$	X	1,000
Cause of Death Rate =	$\frac{\text{Number of deaths from a stated cause}}{\text{Population}}$	X	100,000
Infant Death Rate =	$\frac{\text{Number of infant deaths}}{\text{Number of live births}}$	X	1,000
Neonatal Death Rate =	$\frac{\text{Number of neonatal deaths}}{\text{Number of live births}}$	X	1,000
Fetal Death Ratio =	$\frac{\text{Number of fetal deaths}}{\text{Number of live births}}$	X	1,000
Maternal Death Rate =	$\frac{\text{Number of maternal deaths}}{\text{Number of live births}}$	X	100,000

APPENDIX B (Cont'd) DEFINITIONS

Birthweight - The weight of the fetus or infant at the time of delivery.

Cause of death - The underlying cause of death/condition giving rise to the chain of events leading to death.

Fetal Death (stillbirth) - Death prior to the complete expulsion or extraction from its mother of a product of conception weighing at least 350 grams or more or having passed through at least the 20th week of gestation if the weight is unknown.

Induced termination of pregnancy (ITOP) - The purposeful interruption of an intrauterine pregnancy with the intention other than to produce a live-born infant that does not result in live birth. This excludes management of prolonged retention of products of conception following fetal death.

Infant death - The death of a live-born infant before one year of age.

Live birth - A live birth is the complete expulsion or extraction from its mother of a result of conception, irrespective of the duration of pregnancy, which, after such separation, breathes or shows any other evidence of life, such as beating of the heart, pulsation of umbilical cord, or definite movement of voluntary muscles.

Low birthweight - A weight at birth of less than 2,500 grams or 5 lbs., 8 oz.

Maternal death - For the purpose of this publication, it is the death of a woman while pregnant or within 42 days of termination of pregnancy. This is irrespective of the duration and site of the pregnancy or its management but not from accidental or incidental causes. ICD-10 codes A34, O00-O95, O98-O99.

Neonatal death - The death of a live-born infant that occurs within the first 27 days of life.

Occurrence data - Vital statistics compiled on the basis of where the vital event actually occurred.

Paternity affidavit - A legal document signed by both parents declaring the paternity of their child.

Postneonatal death - The death of a live-born infant that occurs after the 27th day of life but before one year of age.

Residence data - Vital statistics compiled on the basis of the usual place of residence of the person(s) to whom the vital event occurred. For births and fetal deaths, residence is defined as the mother's usual place of residence.

APPENDIX B (Cont'd)

Unemancipated minor - For the purpose of this publication and reporting of Induced Termination of Pregnancy (ITOP), any person under the age of 18 years who has not graduated from high school and is neither married nor who has been otherwise emancipated.

Male-female marriage - For the purpose of this publication and reporting of marriages, where the groom is a male who is marrying a female bride.

Same-sex marriage - For the purpose of this publication and reporting of marriages, where both partners are of the same sex; male is marrying another male, female is marrying another female.
