

High Population Density Testing Week 8: July 10 and 11, 2020

Marshall, Monongalia, Preston and Wayne Counties

Date of Report: July 23, 2020

Background

Under the direction of Gov. Jim Justice, the West Virginia Department of Health and Human Resources (DHHR) established an advisory group to assist in community outreach and education related to COVID-19 in African Americans, Latinos, and other minorities in West Virginia. As part of that effort, the Herbert Henderson Office of Minority Affairs, DHHR and the West Virginia National Guard developed a plan to increase COVID-19 testing opportunities for minorities and other vulnerable populations. This testing was undertaken in partnership with local health departments and other community partners.

While open to all, the testing initiative focused on counties and communities with high African American populations given the disparities by race being seen with COVID-19 both nationally and in West Virginia. Overall, African Americans comprise the largest of West Virginia's minority populations, making up 3.6% of West Virginian residents.¹

The initiative worked to reach residents who have struggled to be seen by a physician or who do not have insurance to pay for testing. It provided free, optional testing to residents, including asymptomatic individuals, in counties with high minority populations and evidence of COVID-19 transmission.

Week Eight of testing was held on July 10 and 11, 2020 in Marshall, Monongalia, Preston and Wayne counties. The percent of the population who are African American among these counties is as follows: Marshall County (0.7%), Monongalia County (4.0%), Preston County (1.2%) and Wayne County (0.6%)¹.

The following data highlights the demographics and test results of individuals tested during the eighth round. Data from additional rounds of community-based testing will be added subsequently.

Of note is the fact that this effort is meant to be a starting point to addressing the issue at hand. It is our hope that the lessons learned and the tools and partnerships developed through this testing initiative can further build upon relationships and systems at the community level to assure education, outreach, testing and follow up care is available to all.

We extend our thanks to all who have made this effort possible, especially the Advisory Task Force and most importantly, the communities themselves.
