

**IX (A). FOOD DELIVERY/FOOD INSTRUMENT (FI)
ACCOUNTABILITY AND CONTROL**

GOAL: With the transition to the Maintenance and Enhancement (M&E) phase of the State Agency Model (Crossroads) as of February 1, 2017, the State Agency (SA) will continue to be involved with changes and updates to the system affecting Food Delivery during FY 2018.

METHODOLOGY: The SA will continue to work closely with DXC Technology (formerly CSC) and the Crossroads User Group (Alabama WIC, West Virginia WIC and Virginia WIC) as change requests are completed. As these updates take place, SA staff will educate Local Agency (LA) staff on the changes to the system as they occur, through additional trainings and updated training materials.

EVALUATION: The effectiveness of the training content and materials will be determined through evaluation forms completed by attendees of subsequent trainings.

STATUS: The SA will continue requesting that trainees complete training evaluations via Survey Monkey regarding the Crossroads training during FY 2019. The “Extended” Crossroads training will continue to occur as needed and normally takes place during LA staff meetings and is facilitated by the SA trainer. The “Extended” training incorporates new updates to the system as they occur.

This will be an ongoing goal for FY 2020.

**IX (B). FOOD DELIVERY/FOOD INSTRUMENT (FI)
ACCOUNTABILITY AND CONTROL**

GOAL: Update the WIC food packages and Food Delivery business processes including Information System revisions, required to implement the Final Food Package Rule.

METHODOLOGY: The SA will work to implement the changes to the WIC food packages that are required with the Final Food Package Rule through collaboration with DXC Technology and the Crossroads User Group, to facilitate revisions as soon as possible. The SA will develop participant education materials and provide training to Competent Professional Authorities/Nutritionists regarding prescription tailoring guidelines for participant preference, supporting health status, and addressing special medical needs.

EVALUATION: The implementation of all required updates to the WIC food packages that are required by the Final Food Package Rule.

STATUS:

The majority of the updates to the WIC food packages required by the Final Food Package Rule have been implemented. The last update to be made in the Crossroads system is the functionality to prescribe and issue food package VII to pregnant women who are breastfeeding. Currently, there is no functionality to allow for issuing food package VII to newly certified pregnant women who are breastfeeding; however, this functionality will be developed once the M&E contract is in place.

This will be an ongoing goal for FY 2020.
