

Prescription Treatments for COVID-19

Oral/IV Antiviral Treatments

- Paxlovid (oral)
- Molnupiravir (oral)
- Remdesivir (IV)

Monoclonal Antibody Treatments

- Sotrovimab (IV)

These prescription-only treatments (extremely limited supply) are for people who:

- Have the medications prescribed within a short timeframe, as early as 5 days from first symptoms of COVID-19.
- Are at high risk for severe COVID-19.
- Meet certain medical criteria depending on the medication.
