#### FOREWORD

West Virginia Vital Statistics 2013 publication provides an in-depth look at births, deaths, marriages and divorces that occurred among state residents in 2013. Beginning with the 2008 edition, state, county and city sections are presented separately. Please see the Table of Contents for further reference.

West Virginia had a natural decrease in population (excess of deaths over births) for the sixth year in a row. West Virginia dropped in overall population between 2012 and 2013, but 17 of the 55 counties gained population.

The number of total births increased (20,813 to 20,829) from 2012 to 2013, while the births to teenage mothers decreased. Births to unmarried mothers stayed about the same in 2013 as 2012, as more than two out of every five births still continue to occur out of wedlock. Among the unmarried mothers giving birth in West Virginia, a father was established through a paternity affidavit in 70.7% of these births, increasing slightly from 70.6% in 2012.

Of the women who gave birth in 2013, 81.9% received prenatal care during the first trimester of pregnancy, while 25.6% smoked during pregnancy. The percentage of low birthweight babies increased in 2013, going from 9.2% in 2012 to 9.4%. In 2013, 36.2% of all babies were delivered by Cesarean section.

The number of deaths increased by 260 in 2013. The average age at death for West Virginians was 69.0 for men and 75.3 for women. Cancer, which has become the leading cause of death in West Virginia for the first time ever, heart disease, chronic lower respiratory disease and accidents were the four leading causes of death, accountable for 56.7% of all deaths in West Virginia. Motor vehicle traffic accident deaths decreased by 21 in 2013, from 353 to 332.

The infant death rate rose from 7.3 per 1,000 live births in 2012 to 7.5 in 2013. The majority (83.4%) of infant deaths was due to conditions originating in the perinatal period, congenital malformations and SIDS (Sudden Infant Death Syndrome). The fetal death ratio increased from 4.5 per 1,000 live births in 2013 compared to 4.2 in 2012. Almost all (90.4%) of fetal deaths were due to conditions originating in the perinatal period.

Marriages decreased for the second year in a row, from 12,996 in 2012 to 12,382. Divorces also decreased, from 8,932 in 2012 to 8,542 in 2013.

Induced termination of pregnancy (ITOP) or induced abortion was added to our annual report beginning in 2005. This section contains data of those terminations performed in West Virginia only. There were 1,876 ITOPs performed in the state in 2013 compared with 1,828 in 2012. In 2013, 85 of these procedures involved a minor under the age of 18 compared with 76 in 2012.

Because of limited funds and the high cost of printing, we ask that you please make copies of this publication and share it with others. Please note that these data can be accessed online later in the year at <a href="http://www.wvdhhr.org/bph/hsc/statserv/">http://www.wvdhhr.org/bph/hsc/statserv/</a> along with other statistical publications. If you need any additional information, please contact the Health Statistics Center at (304) 558-9100 or online at <a href="http://www.wvdhhr.org/bph/hsc/contactUs.asp">http://www.wvdhhr.org/bph/hsc/statserv/</a> along with other statistical publications. # West Virginia Vital Statistics Population

#### **Population Summary**

In 2013, 1,109 West Virginians were lost to the total population as a result of net migration. The 2013 Census shows an overall increase (approximately 0.1%) in the state's population since 2010, from 1,852,994 to 1,854,304. This increase is the result of a slight growth in the excess of inmigration over outmigration during that span, in spite of the natural decrease (excess of deaths over births).

Even though there was an increase in the overall population from 2010 to 2013, less than one-third (15) of the state's 55 counties have shown an increase. Furthermore, only one-half (15) of the state's 30 largest cities have shown an increase in population since the 2010 Census.

The U.S. Census Bureau estimates the population during non-census years and can be found at <u>www.census.gov</u>. Updates are officially announced as of July 1 every year until the decennial census, which is on April 1. Every year, the actual estimates change from previous years, but vintage years are still available on their website.

## West Virginia Vital Statistics **Births**

#### **Birth Summary**

West Virginia's resident live births increased by 16 or 0.1%, from 20,813 in 2012 to 20,829 in 2013. The 2013 birth rate remained the same as 2012 at 11.2 per 1,000 population. The U.S. 2013 birth rate was 12.4 live births per 1,000 population, decreasing 0.2% from the 2012 rate of 12.6. As the graph below shows, West Virginia's birth rate has been well below the national rate since 1991. It continued its overall decline until 1996 and remained relatively stable from 1996 to 2006 and 2008 with a slight increase in 2007.

The 2013 U.S. fertility rate of 62.4 live births per 1,000 women aged 15-44 was lower (2.7%) than the 2012 rate (64.1). West Virginia's fertility rate increased 1.3%, from 60.7 in 2012 to 61.5 in 2013. A comparison of West Virginia and U.S. age-specific fertility rates is displayed below:

|      | Fertility Rates* by Age Group<br>West Virginia and United States, 2013 |    |        |       |         |  |  |  |  |  |
|------|--|----|--------|-------|---------|--|--|--|--|--|
| 15   | -19  | 20 | -44    | Total | (15-44) |  |  |  |  |  |
| WV   | U.S.**   | WV | U.S.** | WV    | U.S.**  |  |  |  |  |  |
| 39.6 | 39.6         26.4         65.3         69.2         61.5         62.4  |    |        |       |         |  |  |  |  |  |

\* All fertility rates were calculated using 2010 Census, U.S. Department of Commerce, Bureau of the Census. \*\*National Center for Health Statistics, <u>http://www.cdc.gov/nchs/data/nvsr/nvsr64/nvsr64\_01.pdf</u> The fertility rate among women aged 15-19 in West Virginia was 50.0% higher than that among young women in the U.S. (39.6 vs. 26.4). The fertility rate among women aged 20-44 was lower by 5.6% in the state than in the nation (65.3 vs.69.2).

The number of births to teen mothers (ages 10-19) decreased by 239 (9.9%), from 2,412 in 2012 to 2,173 in 2013. The percentage of total births represented by teen births was lower in 2013 than 2012 (10.4% vs. 11.6%). The lower fertility rate among older women, however, resulted in teenage births continuing to constitute a higher proportion of total births than was found nationally (7.0% in 2012).

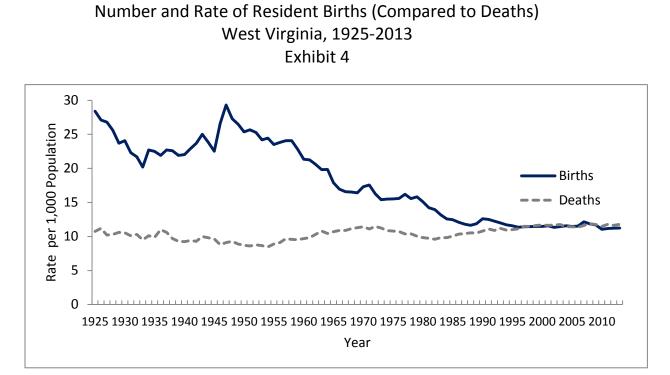

The percentage of births occurring out of wedlock has risen every year for quite some time. More than two of every five (45.1%) West Virginia resident births were to unwed mothers, compared to 44.7% in 2012. The percentages of white and black births that occurred out of wedlock in West Virginia in 2013 were 44.2% and 76.0%, respectively, compared to 43.6% and 75.0% in 2012. In the U.S. in 2013, 29.3% of births to white mothers (non-Hispanic) and 71.5% of births to black mothers (non-Hispanic) occurred out of wedlock. The percentage of teen births to unmarried teen mothers in the state increased from 82.9% in 2012 to 83.2% in 2013.

There was a total of 1,961 low birthweight babies (those weighing less than 2,500 grams or 5½ pounds) born to West Virginia residents in 2013, 9.4% of all births. Of the 1,961 low birthweight infants, 1,269 or 64.9% were preterm babies born before 37 weeks of gestation. (Of all 2013 resident births with a known gestational age, 10.5% were preterm babies.) In 2013, 9.2% of babies born to white mothers and 15.3% of babies born to black mothers were low birthweight. Nationally, 8.0% of all infants weighed less than 2,500 grams at birth in 2013; 7.0% of births to white mothers (non-Hispanic) and 13.1% of births to black mothers (non-Hispanic) were of low birthweight.

In 2013, 81.5% of West Virginia mothers with known prenatal care began their care during the first trimester of pregnancy, compared with 83.2% of mothers nationwide in 2006 (the latest reliable data available). Among those with known prenatal care, 81.9% of white mothers began care during the first trimester; 72.6% of black mothers did so. (U.S. figures show that 88.1% of white mothers and 76.1% of black mothers had first trimester care.) No prenatal care was received by 0.6% of white mothers and 1.0% of black mothers.

More than one-fourth (25.6%) of the births in 2013 were to mothers who smoked during their pregnancies, while 0.4% of births were to women who reported using alcohol. National figures from 2013 show that 8.5% of women giving birth reported smoking during pregnancy; 0.8% used alcohol in 2004 (the latest data available). Among the state mothers who reported smoking during pregnancy, 15.0% of the babies born were low birthweight, compared with 7.5% among non-smoking mothers. Over one-third (36.2%) of 2013 state births were delivered by Cesarean section, compared with a national rate of 32.7%. One or more complications of labor and/or delivery were reported for 32.1% of deliveries in the state in 2012.

The statistics presented in this publication refer to resident data unless otherwise indicated. A resident birth is determined by the residence of the mother when she gives birth, i.e., if she lives in West Virginia. An occurrence birth is determined by where the mother gives birth. If a mother lives in West Virginia but gives birth in Tennessee, that is defined as a West Virginia resident birth and will be included as part of West Virginia's resident statistics; however, it is considered a Tennessee occurrence.

West Virginia Bureau for Public Health

# West Virginia Vital Statistics **Deaths**

#### **Death Summary**

The number of West Virginia resident deaths increased by 260, from 21,586 in 2012 to 21,846 in 2013. The state's crude death rate rose from 2012 at 11.6 per 1,000 population to 11.8 in 2013. The average age at death for West Virginians was 72.1 (69.0 for men and 75.3 for women), compared to the 2012 average of 72.1 (68.8 for men and 75.4 for women). One hundred and sixty-five West Virginia residents who died in 2013 were age 100 or older. The oldest man was 106 years old, while the oldest woman was 113 years old at the time of death.

Cancer, which is now the leading cause of death in the Mountain State, heart disease and chronic lower respiratory diseases, the three leading causes of death, accounted for 50.3% of West Virginia resident deaths in 2013. Compared with 2012, the number of state deaths due to cancer increased by 90 or 1.9%, while heart disease deaths decreased 3.6%. Chronic lower respiratory disease, the third leading cause, increased 4.7%; stroke, the sixth leading cause, decreased 11.1%. Diabetes mellitus deaths increased by 106 or 14.4%, while the number of reported deaths due to influenza/pneumonia increased by 62 or 14.8%. Dementia, now the fifth leading cause of death in the Mountain State, increased by 98 or 9.9%, while Alzheimer's disease also increased by eight or 1.4%. Accidental deaths were the fourth leading cause of death for the seventh year in a row. The number of accidental deaths rose by 73 (4.7%), from 1,348 in 2012 to 1,411 in 2013. Motor vehicle accident deaths decreased by 21 or 5.9%, from 353 in 2012 to 332 in 2013. Accidental poisoning deaths are still a major concern in West Virginia, as it increased by 45 (8.8%) from 510 in 2012 to 555 in 2013. Accidental poisoning accounted for over one-third (34.4%) of all deaths in the age group of 25-34. The vast majority of these deaths was due to both legal and illicit ingestion of prescription pharmaceuticals.

Accidents were the leading cause of death for ages one through 44 years. Motor vehicle accident and accidental poisoning fatalities are the two leading causes of death for young adults aged 15 through 24, accounting for half (50.6%) of all deaths for this age group in 2013. West Virginia's 2013 motor vehicle fatalities included four children under five years of age, two less than 2012.

Suicides decreased by only one, from 325 to 324 between 2012 and 2013. Male suicides increased by 17 or 6.7%, from 253 in 2012 to 270 in 2013; the number of female suicides (54) increased by 18 or 25.0% from 2012. Sixty-nine percent (69.4%) of all suicide deaths were firearm related — 75.9% of male suicides and 37.3% of female suicides. The average age of death for a suicide victim in 2013 was 48.2 years. While suicide was the 11th leading cause of death overall, it was the second leading cause of death for ages 15-34. The number of suicides among persons aged 19 and under was 14 in 2013, one less than 2012 at 15.

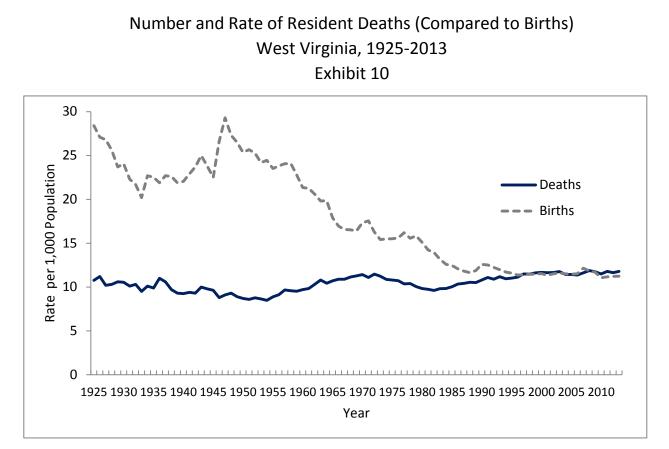

Homicides decreased by 34, from 110 in 2012 to 76 in 2013. Fifty-seven (57) of the homicide victims were male, 19 were female. The average age at death for a homicide victim in 2013 was 36.3 years. There were six homicide victims under the age of five in 2013, same as 2012. Over half (56.6%) of 2013 homicide deaths were due to firearms.

The statistics presented in this publication refer to resident data unless otherwise indicated. A resident death is determined by where the decedent last lived at the time of death. An occurrence death is determined by where the decedent died. If a person lived in West Virginia but died in New Jersey, that is defined as a West Virginia resident death and will be included as part of West Virginia's resident statistics; however, it is considered a New Jersey occurrence.

#### Years of Potential Life Lost (YPLL)

YPLL is a measure of mortality calculated as the difference between age 75 (an average life span) and the age at death. Using YPLL before age 75, the sum of YPLL across all causes of death represents the total YPLL for all persons dying before the age of 75. A person dying at the age of 30 would, therefore, contribute 45 years to the total YPLL (75-30=45). YPLL is an important tool in emphasizing and evaluating causes of premature death.

The YPLL from all causes increased 0.3%, from 177,365 YPLL in 2012 to 177,893 in 2012. The four leading causes of YPLL in 2013 were malignant neoplasms (36,773 YPLL), diseases of the heart (25,020 YPLL), non-motor vehicle accidents (24,519 YPLL) and motor vehicle accidents (10,538 YPLL). Combined, these four causes accounted for over half (54.3%) of all years of potential life lost in 2013. In comparison to 2012, YPLL attributable to malignant neoplasms increased from 20.4% to 20.7% of the total YPLL. YPLL due to diseases of the heart decreased from 14.7% to 14.1%, YPLL due to non-motor vehicle accidents increased from 12.6% to 13.8%, and the percentage of total YPLL due to motor vehicle crashes decreased from 6.1% to 5.8%.

## West Virginia Vital Statistics Infant & Fetal Deaths

#### Infant and Fetal Death Summary

Deaths of infants under one year of age increased by five, from 152 in 2012 to 157 in 2013. West Virginia's infant mortality rate also rose, from 7.3 per 1,000 live births in 2012 to 7.5 in 2013. The U.S. infant mortality was 6.0 in 2013.

The following table shows the decline in the national and state infant mortality rates from 1950 through 2013.

|      | •        |        |
|------|----------|--------|
| Year | West     | United |
|      | Virginia | States |
| 1950 | 31.4     | 29.2   |
| 1955 | 27.1     | 26.4   |
| 1960 | 25.3     | 26.0   |
| 1965 | 27.1     | 24.5   |
| 1970 | 23.3     | 20.0   |
| 1975 | 18.3     | 16.1   |
| 1980 | 11.8     | 12.6   |
| 1985 | 10.7     | 10.6   |
| 1990 | 9.8      | 9.1    |
| 1995 | 7.6      | 7.5    |
| 2000 | 7.6      | 6.9    |
| 2005 | 8.1      | 6.9    |
| 2006 | 7.4      | 6.7    |
| 2007 | 7.4      | 6.8    |
| 2008 | 7.7      | 6.6    |
| 2009 | 7.8      | 6.4    |
| 2010 | 7.3      | 6.1    |
| 2011 | 6.8      | 6.0    |
| 2012 | 7.3      | 6.0    |
| 2013 | 7.5      | 6.0    |

## 1950 – 2013 Infant Mortality West Virginia and United States (Number and Rate per 1,000 Live Births)

The state's 2013 white infant mortality rate increased from 6.9 in 2012 to 7.3 in 2013, while the rate for black infants decreased from 19.6 to 13.6 (see Statistical Variation in Appendix B, page 167). West Virginia's 2013 race-specific infant mortality rates and comparable U.S. rates are shown in the table on the following page.

## 2013 West Virginia and United States Infant Mortality by Race of Infant (Number and Rate per 1,000 Live Births)

| Race of   |        | est<br>inia | United<br>States* |      |  |
|-----------|--------|-------------|-------------------|------|--|
| Infant    | Number | Rate        | Number            | Rate |  |
| All Races | 157    | 7.5         | 23,440            | 6.0  |  |
| White     | 143    | 7.3         | 15,125            | 5.1  |  |
| Black     | 10     | 13.6        | 7,123             | 11.2 |  |
| Other     | 4      | 10.6        | 1,192             | 3.7  |  |

\*Source: <u>http://www.cdc.gov/nchs/data/nvsr/nvsr64/nvsr64\_02.pdf</u>

Approximately one out of five (19.7%) infant deaths in 2013 was due to SIDS (sudden infant death syndrome). More than one in four (27.4%) was the result of congenital malformations, while 36.3% were due to certain conditions originating in the perinatal period, including disorders relating to short gestation and unspecified low birthweight (10.8%).

#### Neonatal/Postneonatal Deaths

The number of neonatal deaths dropped by three, from 96 in 2012 to 93 in 2013; the neonatal death rate also decreased, from 4.6 deaths among infants aged less than 28 days per 1,000 live births in 2012 to 4.5 in 2013. Neonatal deaths comprised 59.2% of all West Virginia resident infant deaths in 2013, compared with 63.2% in 2012. The rate of postneonatal deaths rose from 2.7 deaths per 1,000 neonatal survivors in 2012 to 3.1 in 2013. The 2013 U.S. neonatal death rate was 4.0, while the postneonatal rate was 1.9 deaths per 1,000 neonatal survivors.

#### Fetal Deaths

The 94 resident fetal deaths reported with a birthweight of at least 350 grams or occurring after 20 or more weeks of gestation (if the weight is unknown) in 2013 were six more than in 2012 (88). The fetal death ratio also increased, from 4.2 deaths per 1,000 live births in 2012 to 4.5 in 2013. The majority (90.4%) of fetal deaths were due to conditions originating in the perinatal period, including complications of placenta, cord and membrane (23.4%), maternal conditions (9.6%), maternal complications (11.7%), short gestation and low birthweight (7.4%) and other ill-defined perinatal conditions (28.7%). Congenital malformations accounted for 8.5% of all fetal deaths.

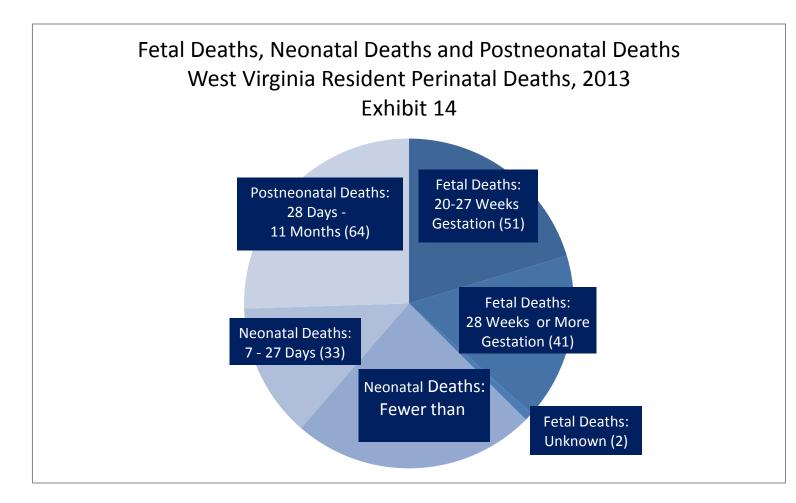

|      | Fetal  | Deaths     | Neona  | tal Deaths |        | Postneonatal | Deaths         |

# West Virginia Vital Statistics Induced Terminations of Pregnancy (ITOP)

#### Induced Terminations of Pregnancy (ITOP) Summary

The annual reporting of induced terminations of pregnancy (ITOP), also properly referred to as "induced abortion," was mandated in the latest revision of the West Virginia Code. An ITOP is a purposeful interruption of an intrauterine pregnancy with the intention other than to produce a live-born infant and which does not result in a live birth. The management of prolonged retention of products of conception following fetal death is excluded. The major distinguishing feature of this event is the fact that it is "purposeful" rather than spontaneous. A spontaneous interruption of a pregnancy is also known as a fetal death or a spontaneous abortion or, more commonly, as a miscarriage or a stillbirth.

One of the primary differences between the reporting of ITOP statistics and birth and death statistics in this publication is that ITOP statistics reflect events that occurred in West Virginia. Due to exchange agreements with other states, births and deaths to West Virginia residents that occur elsewhere are reported back to the state, making it possible to ascertain the number of births and deaths among state residents in a given time frame regardless as to where the event occurred. Information on the number of West Virginia residents who obtain an ITOP in another state is infrequently reported back to West Virginia by the state where the procedure took place, normally due to restrictions within the other state's legal code.

The only two free-standing clinics that perform ITOPs on demand in West Virginia are in Charleston, which makes the likelihood of out-of-state ITOPs greater in some regions of the state. It is unlikely that the majority of women living in the northern or eastern panhandles of the state seeks an ITOP in West Virginia. Due to known incomplete reporting, therefore, the procedures performed on West Virginia residents in other states have been excluded from the compiled statistics.

West Virginia legal code requires clinics to provide counseling and informational guidance to females seeking an abortion. All but three of the 2013 ITOP records indicate the female did, in fact, receive counseling, compared to all but one in 2012. There are some isolated incidents where the abortion needs to be performed due to a medical emergency. In 2013, there was one ITOP performed due to a medical emergency same as 2012.

In 2013, there were 1,876 ITOPs performed in West Virginia, 48 or 2.6% more than in 2012 (1,828). More than five out of every six (86.4%) ITOPs involved a West Virginia resident, while 6.9% were Ohio residents and 6.5% were residents of Kentucky, compared with 2012 percentages of 86.4%, 4.8% and 6.0%, respectively. The median age of women having an ITOP in 2013 was 25, compared to age 24 in 2012. There were 85 procedures in 2013 involving females under the age of 18, of which 82 were performed on unemancipated\*minors, compared with 76 in 2012, of which 73 were performed on unemancipated minors. Nearly five out of every six (83.4%) of the 2013 ITOPs performed in West Virginia involved women who were not married at the time. Nearly one-third (33.2%) of the 2013 ITOPs involved women who had never had a previous live birth, while 86.7% were to women who had two or fewer children. There were five ITOPs performed on a woman who had six or more children. More than sixty-three percent (63.1%) involved women for whom it was their first ITOP, while nearly all (95.8%) involved women who had two or fewer previous ITOPs. Six ITOPs were performed upon women who previously had six or more ITOPs.

\*For the purpose of ITOP reporting, unemancipated minor means any person under the age of 18 years who has not graduated from high school and is neither married nor who has been otherwise emancipated.

Note: Gestational age is the physician's estimate of gestation (clinical/obstetric estimate).

If the physician's estimate of gestation is not available, it is calculated from the date of onset of last normal menses.

## West Virginia Vital Statistics Marriages & Divorces

#### **Marriages**

The number of marriages in West Virginia decreased for the second year in a row, from 12,996 in 2012 to 12,382 in 2013. The marriage rate in 2013 was 6.7 per 1,000 population, lower than the 2012 rate of 7.0. The 2012 U.S. provisional rate was 6.8 which is the latest available year.

For all marriages in 2013, the median age was 29 for brides and 31 for grooms. The mode (most frequently reported age) for all marriages was 23 for brides and grooms. There were 96 brides and 13 grooms aged less than 18. There were 183 brides and 330 grooms over the age of 65. Also in 2013, there were 212 marriages in which the groom was 20 years or more older than the bride, while there were 16 marriages in which the bride was at least 20 years older.

For first marriages, the median age for brides was 24; for grooms it was 26. The mode for first marriages in West Virginia was 22 for brides and 23 for grooms. All of West Virginia's brides and grooms less than 18 years of age were in their first marriage. There were one bride and six grooms over the age of 65 for which it was a first marriage.

#### **Divorces and Annulments**

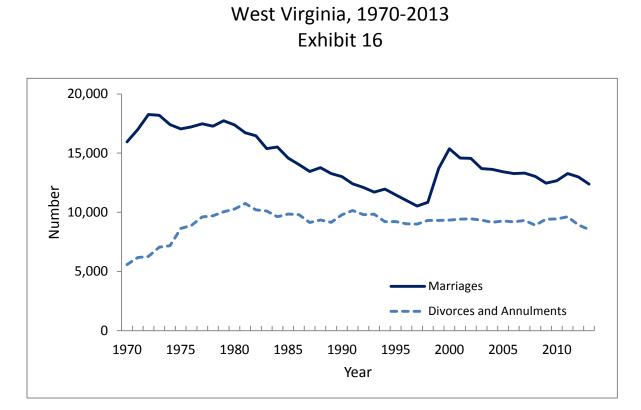

The number of divorces and annulments decreased by 390 or 4.4%, from 8,932 in 2012 to 8,542 in 2013. The 2013 rate of 4.6 per 1,000 population was lower than the 2012 rate of 4.8.

Of the 8,542 divorces in West Virginia in 2013, the median duration of marriage was seven years. More than one out of every five (21.6%) West Virginia divorces with a known duration in 2013 involved marriages lasting only two years or less; 8.0% involved marriages of 25 years or longer. There were 10 divorces involving a wife aged less than 18, and there were three husbands under age 18. During 2013, 129 divorces involved a wife aged 65 or older and 229 involved a husband in that age group.

More than one-half (54.3%) of the divorces involved no children under 18 years of age in the family, while one child was involved in 22.1% of all divorces and two children were involved in 17.0%. Four divorces involved six or more children.

#### Note Regarding Marriage and Divorce/Annulment Statistics

Statistics regarding marriage and divorce/annulments are by occurrence only. They include only those that occur within West Virginia regardless of where the couple resides.

Marriages, Divorces and Annulments

| Year | Marriages | Divorces and<br>Annulments |
|------|-----------|----------------------------|
| 1970 | 15,948    | 5,584                      |

# West Virginia Vital Statistics County-Level Data

#### County and City Summary

Beginning with the *West Virginia Vital Statistics 2008* report, the Health Statistics Center began separating county statistics from the state totals. Although the tables have been rearranged from previous publications, the same information is presented. The birth section is followed by information on deaths (including infant and fetal) and then marriages and divorces. Practically all of ITOP data is collected from two clinics, both in Kanawha County, and is reported as occurrence data. ITOP statistics displayed at the county or city level would be meaningless and misleading.

West Virginia Vital Statistics 2007 expanded the number of cities for which data were presented. Before then, data were included for the 15 cities in the state that had populations of 10,000 or more. Because some cities have dropped below that mark in the past decade or more, it was then decided to include data for the state's 25 most populated cities, regardless of the size of the population. It has now increased to the 30 most populated cities beginning with the 2010 edition.

### Number of Births by County of Residence and Occurrence Birth Rates by County of Residence West Virginia, 2013 Table 42

# West Virginia Vital Statistics Appendix B: Methodology, Rates/Ratios and Definitions

# Appendix B Methodology

Data used to prepare this report are taken from birth and death certificates, fetal death reports, marriage applications, divorce reports, Induced Terminations of Pregnancy (ITOP) and paternity affidavits occurring in calendar year 2013 and filed in the state office of vital statistics prior to February 18, 2015. Vital events occurring to West Virginia residents in other states and tabulated by June 1, 2015, are also included in totals by residence.

#### Place of Residence vs. Place of Occurrence

Data on vital events can be reported in two ways: by county of residence or by county of occurrence. For example, 140 births occurred within the geographic confines of Mason County of which only so many were to mothers who reside in Mason County; the remainder resides in other counties or states. Resident births for the county for 2013 totaled 282, which include 61 births that occurred in Mason County and 221 births to Mason County residents that occurred elsewhere. With the exception of Tables 11, 12, 13, 14, 16, 46 and Exhibit 9, natality data presented in this report are based on place of residence, and resident populations are used to calculate rates.

With the exception of Table 19 and the second page of Table 54, mortality data are similarly reported by place of residence.

#### **Statistical Variation**

All statistics contain variations that are the result of chance, error, or omission. This characteristic is of particular importance in classifications of events with small numbers in which small variations are proportionately large in relation to base figures. For example, small changes in the number of deaths or births in small population areas or in the number of deaths from uncommon causes could result in large changes in the respective rates. For this reason, rates for counties with small populations or other small bases should be used with caution.

Table 31 presents the number of infant deaths by race of mother, while the table on page 76 in the summary has the number of infant deaths by race of infant.

#### **Geographic Classification**

The county has been used as the basic unit of tabulation throughout this report. Data have also been supplied for public health management districts and for the total state. In some instances, data have been supplied for individual cities.

# Cause of Death Classification

The cause of death is coded from information contained in the medical certification section of the death certificate. This portion of the certificate is completed by the attending physician. In the case of unattended death, the medical examiner is responsible for investigation and certification.

Effective in 1999, the National Center for Health Statistics and the World Health Organization adopted the *Tenth Revision of the International Classification of Diseases Adapted for Use in the United States, 1999 (ICD-10).* The deaths with codes A00 through T98 and Z00-Z99 were coded using the "nature of injury" causes, while those with codes V01 through Y98 were coded using the "external cause" of death. The external codes are used to indicate a death due to an external rather than an internal cause.

In several tables, individual causes of death have been grouped into important selected causes of death. See Appendix A, Page 163, "Groupings of ICD-10 Codes," for a listing of the selected causes of death.

#### **Population**

The rates given in this publication were calculated using the 2013 population estimated figures from the U.S. Department of Commerce, Bureau of the Census. This can be found on the Internet at <u>http://www.census.gov/popest/data/index.html</u>, and then go to American FactFinder which is where detailed population figures are stored.

#### <u>Forms</u>

The following is a list of the certificates and forms used in obtaining the data used in this publication.

Certificate of Live Birth Physician's/Medical Examiner's Certificate of Death Report of Fetal Death Application for Marriage License Monthly Report of Divorces and Annulments of Marriages Granted Induced Termination of Pregnancy (ITOP) Declaration of Paternity Affidavit

Suggestions and comments on alternate methods of data presentation are welcome. Forward any suggestions to the following address:

> West Virginia Department of Health and Human Resources Bureau for Public Health Health Statistics Center 350 Capitol Street, Room 165 Charleston, WV 25301-3701 Telephone: (304) 558-9100 FAX: (304) 558-1787 E-Mail: <u>dhhrvitalreg@wv.gov</u>

#### **Rates and Ratios**

The impact of variation must be considered in evaluating categories with small frequencies. For example, a small change in the number of infant deaths in a county can disproportionately affect the infant mortality rate for that county. Therefore, rates for cities and counties require special consideration. State rates with larger frequencies provide more accurate data overall.

Rates used in this report are calculated with the estimated 2012 population figures from the U.S. Department of Commerce, Bureau of the Census.

| Birth Rate (Crude) =     | <u>Number of live births</u><br>Population                              | X | 1,000   |
|--------------------------|---|---|---------|
| Fertility Rate =         | Number of live births to women aged 15-44<br>Number of women aged 15-44 | Х | 1,000   |
| Teenage Fertility Rate = | Number of live births to women aged 15-19<br>Number of women aged 15-19 | x | 1,000   |
| Death Rate (Crude) =     | <u>Number of deaths</u><br>Population                                   | x | 1,000   |
| Cause of Death Rate =    | <u>Number of deaths from a stated cause</u><br>Population               | х | 100,000 |
| Infant Death Rate =      | <u>Number of infant deaths</u><br>Number of live births                 | х | 1,000   |
| Neonatal Death Rate =    | Number of neonatal deaths<br>Number of live births                      | x | 1,000   |
| Fetal Death Ratio =      | <u>Number of fetal deaths</u><br>Number of live births                  | x | 1,000   |
| Maternal Death Rate =    | <u>Number of maternal deaths</u><br>Number of live births               | х | 100,000 |

# Definitions

<u>Birthweight</u> - The weight of the fetus or infant at the time of delivery.

<u>Cause of Death</u> - The underlying cause of death/condition giving rise to the chain of events leading to death.

<u>Fetal Death (Stillbirth)</u> - Death prior to the complete expulsion or extraction from its mother of a product of conception weighing at least 350 grams or more or having passed through at least the 20th week of gestation if the weight is unknown.

<u>Induced Termination of Pregnancy (ITOP)</u> - The purposeful interruption of an intrauterine pregnancy with the intention other than to produce a live-born infant that does not result in live birth. This excludes management of prolonged retention of products of conception following fetal death.

Infant Death - The death of a live-born infant before one year of age.

<u>Live Birth</u> - A live birth is the complete expulsion or extraction from its mother of a result of conception, irrespective of the duration of pregnancy, which, after such separation, breathes or shows any other evidence of life, such as beating of the heart, pulsation of umbilical cord, or definite movement of voluntary muscles.

Low Birthweight - A weight at birth of less than 2,500 grams or 5 lbs., 8 oz.

<u>Maternal Death</u> – For the purpose of this publication, it is the death of a woman while pregnant or within 42 days of termination of pregnancy. This is irrespective of the duration and site of the pregnancy or its management but not from accidental or incidental causes. ICD-10 codes A34, 000-095, 098-099.

Neonatal Death - The death of a live-born infant that occurs within the first 27 days of life.

<u>Occurrence Data</u> - Vital statistics compiled on the basis of where the vital event actually occurred.

<u>Paternity Affidavit</u>- A legal document signed by both parents declaring the paternity of their child.

<u>Postneonatal Death</u> - The death of a live-born infant that occurs after the 27th day of life but before one year of age.

<u>Residence Data</u> – Vital statistics compiled on the basis of the usual place of residence of the person(s) to whom the vital event occurred. For births and fetal deaths, residence is defined as the mother's usual place of residence.

<u>Unemancipated Minor</u> – For the purpose of this publication and reporting of Induced Termination of Pregnancy (ITOP), any person under the age of 18 years who has not graduated from high school and is neither married nor who has been otherwise emancipated.
