**1**Infants 6-11 months of age may receive the same monthly maximum as infants 4 through 5 months of age when infant foods are contraindicated for medical reasons.

**2**Reported infant cases with serious infections secondary to *Enterobacter sakazakii* have been reported in the literature that were traced back to powdered infant formulas contaminated with this organism. Preterm infants and those with underlying medical conditions may be at higher risk of developing infection. FDA recommends sterile, commercial Ready-to-Feed (RTF) formulas for immunocompromised infants including preterm infants. WIC routinely provides powdered formula.
