

October 2020

How big is the problem?

In 2019, there was a decrease in the average yearly rate of opioids doses filled, patients with an average of over 90 MME per day, percent of overlapping opioids prescribed, and number of prescribers who prescribed greater than 50 MME prescriptions, compared to 2018. There was an overall increase in gabapentin doses, naloxone prescriptions, and total MAT prescriptions, compared to 2018.

For the month of October 2020, there was an increase in the rate of opioid doses dispensed, the percent of patients receiving more than an average daily dose of 90 MMEs, gabapentin doses, MAT prescriptions, and the number of prescribers who wrote an opioid prescription for ≥ 50 MME compared to September 2020. However, there was a decrease in the percent of patients with overlapping opioid and benzodiazepines and naloxone doses.

What is being done?

The West Virginia Board of Pharmacy continues to monitor controlled substances that are dispensed in the state. Efforts are being made to identify high-risk prescribing. County level assessments are also being conducted on a semi-annual basis to identify high-burden areas in the state where the West Virginia Academic Detailing team can focus their prescriber education efforts.
