

West Virginia Board of Pharmacy

Controlled Substance Monitoring Program

Monthly Surveillance Report

November 2022

How big is the problem?

In 2021, there was a decrease in the average yearly rate for opioid doses filled, patients with an average of over 90 MME per day, percent of overlapping opioids and benzodiazepines prescribed, number of prescribers who prescribed greater than 50 MME prescriptions, and gabapentin doses, compared to 2020. Also, there was an overall increase in naloxone prescriptions and total MAT prescriptions in 2021.

In November 2022, there was a decrease in the rate of opioid doses and the number of naloxone prescriptions. There was an increase in the percent of patient prescribed days with overlapping opioid and benzodiazepines, the number of gabapentin doses, the number of MAT prescriptions, the number of prescribers prescribing ≥ 50 MMEs, and the percent of patients prescribed ≥ 90 MMEs per day compared to October 2022.

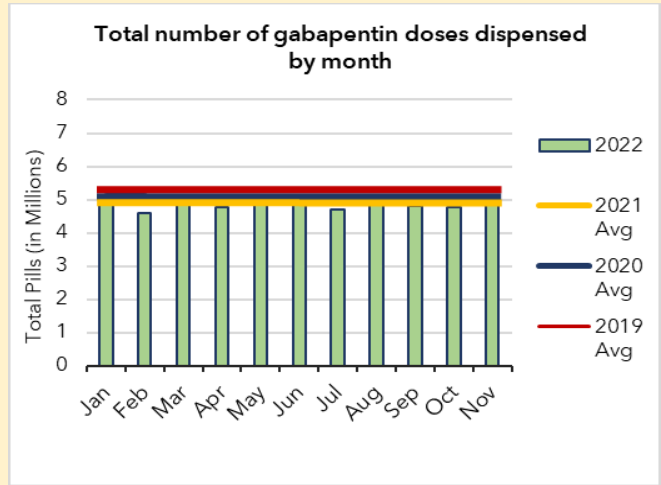

There was a 6.23% increase in the number of naloxone prescriptions dispensed in November 2022 when compared to the number of naloxone prescriptions dispensed in November 2021.

What is being done?

The West Virginia Board of Pharmacy continues to monitor controlled substances that are dispensed in the state. Efforts are being made to identify high-risk prescribing. County level assessments are also being conducted on a semi-annual basis to identify high-burden areas in the state where the West Virginia Academic Detailing team can focus their prescriber education efforts.
