

October 2024

How Big Is the Problem?

In 2023, there was a decrease in the average yearly rate for opioid doses filled, patients with an average of over 90 MMEs per day, number of gabapentin doses, and MAT prescriptions, compared to 2022.

There was an overall increase in the average yearly rate for stimulant prescriptions filled, number of prescribers who wrote a prescription for ≥ 50 MMEs, and percent of overlapping opioids and benzodiazepines prescribed in 2023.

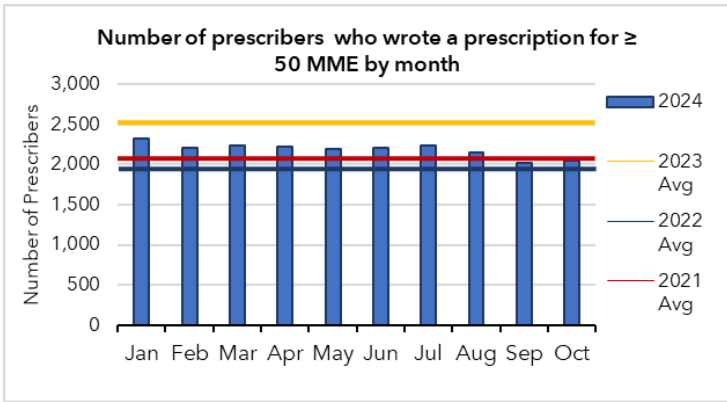

In October 2024, there was an increase in the rate of opioid doses filled, the percentage of patients with an average of over 90 MMEs per day, the number of gabapentin doses dispensed, the number of prescribers prescribing ≥ 50 MMEs, the rate of stimulant prescriptions dispensed, and the number of MAT prescriptions dispensed, compared to September 2024.

There was a decrease in the percent of overlapping opioids and benzodiazepines, compared to September 2024.

What Is Being Done?

The West Virginia Board of Pharmacy continues to monitor controlled substances that are dispensed in the state. Efforts are continually made to identify high-risk prescribing. County level assessments are also being conducted on a semi-annual basis to identify high-burden areas in the state, where the West Virginia Academic Detailing team can focus their prescriber education efforts.
