

BUREAU FOR MEDICAL SERVICES WEST VIRGINIA MEDICAID PREFERRED DRUG LIST WITH PRIOR AUTHORIZATION CRITERIA This is not an all-inclusive list of available covered drugs and includes only managed categories. Refer to cover page for complete list of rules governing this PDL.

EFFECTIVE	
<u>10/01/2021</u>	Deleted: 07
Version 2021.4a	Deleted: 3b

- Prior authorization for a non-preferred agent in any class will be given only if there has been a trial of the preferred brand/generic equivalent or preferred formulation of the active ingredient, at a therapeutic dose, that resulted in a partial response with a documented intolerance.
- Prior authorization of a non-preferred isomer, pro-drug, or metabolite will be considered with a trial of a preferred parent drug of the same chemical entity, at a therapeutic dose, that resulted in a partial response with documented intolerance or a previous trial and therapy failure, at a therapeutic dose, with a preferred drug of a different chemical entity indicated to treat the submitted diagnosis. The required trial may be overridden when documented evidence is provided that the use of these preferred agent(s) would be medically contraindicated.
- Unless otherwise specified, the listing of a particular brand or generic name includes all legend forms of that drug. OTC drugs are not covered unless specified.
- PA criteria for non-preferred agents apply in addition to general Drug Utilization Review policy that is in effect for the entire pharmacy program, including, but not limited to, appropriate dosing, duplication of therapy, etc.
- The use of pharmaceutical samples will not be considered when evaluating the members' medical condition or prior prescription history for drugs that require prior authorization.
- Quantity limits may apply. Refer to the Limits List on the BMS Website by clicking the hyperlink.
- Unless otherwise indicated, non-preferred combination products require medical reasoning beyond convenience or enhanced compliance as to why the clinical need cannot be met with a preferred agent or combination of preferred single-ingredient agents.
- Acronyms
 - o CL Requires clinical PA. For detailed clinical criteria, please go to the PA criteria page by clicking the hyperlink.
 - NR Denotes a new drug which has not yet been reviewed by the P & T Committee. These agents are available only on appeal to the BMS Medical Director.
 - AP Non-preferred and selected preferred drugs, where indicated, are subject to auto-PA criteria. See PA criteria column.

This is not an all-inclusive list of available covered drugs and includes only managed categories. Refer to cover page for complete list of rules governing this PDL. EFFECTIVE <u>10/01/2021</u> Version 2021.<u>4a</u>

SORILUX (calcipotriene)
tazarotene cream

ZELAPAR (selegiline)

.

ANTIPSYCHOTICS, ATYPICAL

CLASS PA CRITERIA: All antipsychotic agents require prior authorization for children up to eighteen (18) years of age. All PA requests for antipsychotics for children 6 years of age and younger will be reviewed by Medicaid's consultant psychiatrist.

Non-preferred agents require thirty (30) day trials of two (2) preferred agents, including the generic formulation of the requested agent (if available), before they will be approved unless one (1) of the exceptions on the PA form is present. All trials must be at the maximum recommended dose for the diagnosis provided before they would be considered a failure unless an adverse reaction is documented necessitating a change in therapy.

Patients shall be grandfathered onto their existing therapy, provided the requested agent is being used according to the manufacturer label. Continuation of therapy for an off-label indication or non-standard dosage may be granted a thirty (30) day prior-authorization while the Medical Director reviews the request.

CLASS PA CRITERIA: Non-preferred agents require a ninety (90) day trial of a pharmacokinetically similar agent before they will be approved, unless one (1) of the exceptions on the PA form is present.

*Apidra will b	e authorized	if the fo	llowing cı	riteria are	met:

- 1. Patient is four (4) years of age or older; and
- 2. Patient is currently on a regimen including a longer acting or basal insulin, **and**
- 3. Patient has had a trial of a similar preferred agent, Novolog or Humalog, with documentation that the desired results were not achieved..

** Non-preferred insulin combination products require that the patient must already be established on the individual agents at doses not exceeding the maximum dose achievable with the combination product, and require medical reasoning beyond convenience or enhanced compliance as to why the clinical need cannot be met with a combination of preferred single-ingredient agents.

***Patients stabilized on Tresiba may be grandfathered <u>at the</u> request of the prescriber, if the prescriber considers the preferred products to be clinically inappropriate.

***<u>Tresiba U-100 may be approved only for:</u> Patients who have demonstrated at least a 6-month history of compliance on a preferred long-acting insulin and who continue to have regular incidents of hypoglycemia.

***<u>Tresiba U-200 may be approved only for:</u> Patients who require once-daily doses of at least 60 units of long-acting insulin and have demonstrated at least a 6-month history of compliance on preferred long-acting insulin and who continue to have regular incidents of hypoglycemia.
