

Welcome to ICD-10 READY OR NOT

- **ICD-10 Overview**
- **ICD-10 Preparation**
 - Planning
 - Communication
 - Assessment
 - Operational Implementation
 - Testing
 - Transition
- **Split Claims**
- **Resources**
- **Contact**

ICD-10 Overview

- **World Health Organization**-developed ICD-10 in 1994
 - Later adopted by Health and Human Services (HHS) and Centers for Disease Control and Prevention (CDC)
 - ICD-10 is a provision of Health Insurance Portability and Accountability Act (HIPAA) regulations
 - HIPAA-covered entities include health care providers, payers, clearinghouses, billing services and others that must transition to ICD-10

- **Moving from ICD-9 to ICD-10**-the US is the last industrialized nation to adopt ICD-10

- **ICD-9 is outdated**-limited capacity, capability and unable to serve future needs

- **ICD-10-CM and ICD-10-PCS code sets**
 - ICD-10-CM replaces ICD-9-CM (Volumes 1 and 2)
 - ICD-10-PCS replaces ICD-9-CM (Volume 3)

- **ICD-10 has no direct impact on Current Procedural Terminology (CPT) codes and Healthcare Common Procedure Coding System (HCPCS)**

**Making the
transition
to ICD-10 is
NOT optional**

Why is the transition necessary?

- ICD-9 code sets are outdated, limited and not expandable
- ICD-9 cannot capture advances in medicine and medical technology
- ICD-10 code sets use current medical terminology and will allow for advances in medical technology and knowledge
- ICD-10 allows for greater detail in diagnoses and treatments

ICD-10 Overview (Cont.)

- **For services rendered on or after October 1, 2015**
 - All claims must use ICD-10 codes
 - Claims using ICD-9 codes for services rendered on or after October 1, 2015 will NOT be accepted

- **For services rendered before October 1, 2015**
 - All claims must use ICD-9 codes

- **Systems must accommodate BOTH ICD-9 and ICD-10 codes**
 - Effective with the October 1, 2015 compliance date

- **Significant Code Increase from ICD-9 to ICD-10**
 - Increasing from 14,000 to approximately 69,000 ICD-10-CM codes
 - Increasing from 3,000 to approximately 87,000 ICD-10-PCS codes
 - ICD-10 has more than nine times the codes in ICD-9

Why ICD-10 matters:

- ICD-10 advances health care and the implementation of eHealth initiatives
- ICD-10 captures advances in medicine and medical technology
- ICD-10 improves data for quality reporting
- ICD-10 improves public health research, reporting and surveillance

Where is your organization in the implementation planning process?

- Planning
- Communication
- Assessment
- Operational implementation
- Testing
- Transition

Develop a plan and timeline to support a smooth transition:

- Communicate to staff about the organization's implementation plans
- Perform an impact assessment and identify potential changes to existing work flow and business processes
- Determine a business and technical implementation strategy including the development of a contingency plan for issues that may occur after implementation
- Create a budget for all costs associated with implementation that includes software, hardware procurement and staff training
- Work with vendors to develop an internal system design as needed
- Secure training for staff regarding changes in documentation requirements
- Conduct internal and external testing
- Work with vendors to transition the ICD-10 systems to production

Develop a communication plan that identifies:

- Stakeholders
- Audiences
- Messages
- Issues
- Roles and responsibilities
- Timelines
- Communication methods
- Evaluation techniques

An assessment may involve:

- Identifying staff that regularly use ICD codes and the resources used to assign those codes
- Performing a gap analysis:
 - Assess the quality of medical record documentation to identify improvement opportunities prior to October 1, 2015
 - Medical record sampling techniques which may include records that are selected randomly by clinical specialty, top diagnoses or high volume diagnoses
- Determining technology that will require the use of ICD-10 codes
- Contacting vendors to check the status of their ICD-10 transition
- Testing and more testing! Trading partners, the practice management system and electronic health records (EHRs) are the major systems that need to be tested
- As the assessment is developed, consider how issues will be handled after implementation in order to build a contingency plan

Evaluate your organization's action plan and determine tasks that need to be accomplished or revisited:

- Check communication to make sure that unified messages are being distributed within your organization and externally
- Review how your organization has engaged its trading partners to determine if any additional action is necessary
- Verify training efforts that have occurred and narrow down topics to be reviewed
- Reassess and test business processes and IT systems affected

Develop a contingency plan:

- Your organization should establish procedures for continued operations in the event of critical system issues or disruptions experienced during:
 - Testing phase
 - Deployment of system changes
 - Post-implementation period

A contingency plan should include:

- Identification of the contingency decision maker and support staff
- Staff assignments and a process of how they should notify affected parties
- Alternative procedures to reduce the impact of disruptions to claims processing operations and payments to providers
- A reconstruction plan for systems and the transition to normal operations
- Coordination of contingency planning between stakeholders and staff

Testing will confirm ICD-10 compliance with policies, processes and systems and with trading partners and vendors:

- After systems are updated to accommodate ICD-10, providers should complete several types of tests
- Internal testing should merge all components affected by ICD-10 and test the flow of ICD-10 data
- A post-testing assessment determines accuracy, performance and targets issues
- External testing is essential to ensure the uninterrupted flow of transactions with trading partners
 - For more information about ICD-10 testing for providers, visit [CMS End-to-End Testing](#)

There are a number of informative tools to assist with tracking the transition to ICD-10:

- [WV Molina Medicaid Solutions ICD-10 Transition website](#) for ICD-10 news, training information and additional resources
- [CMS ICD-10 website](#) for the latest news and resources
- Stay current by signing up for CMS ICD-10 Industry Email Updates on [this page](#)

Claims that span across **October 1, 2015:**

- This will require two separate claims. For the service(s) rendered before October 1, 2015, the claim must use ICD-9 codes. For the service(s) rendered on or after October 1, 2015, the claim must use ICD-10 codes
- Claims using ICD-9 codes for services rendered on or after October 1, 2015 will NOT be accepted
- The CMS article below provides clarification on the policy for processing split claims that span across October 1, 2015
